<b>Chairman's welcome and opening statement</b>	4
<b>TOPIC 1 - The Regulatory System</b>	
<b>MR S DEAN</b> (Veterinary Medicines Directorate)	6
<b>MR P SKETCHLEY</b> (National Office of Animal Health)	12
<b>Letters and E-mails</b>	16
<b>General discussion</b>	18
<b>TOPIC 2 - Dispensing of prescription only medicines           by pharmacists</b>	
<b>MR T WILLIAMS</b> (National Pharmaceutical Association)	22
<b>MR R GREEN</b> (Royal College of Veterinary Surgeons)	28
<b>MR S EVANS</b> (Dechra Pharmaceuticals PLC)	30
<b>MR N GRAHAM</b> (Royal Pharmaceutical Society)	32
<b>E-mails</b>	36
<b>General discussion</b>	37
<b>TOPIC 3 - Veterinary surgeons' charges for prescription           only medicines</b>	
<b>MR A SCOTT</b> (British Veterinary Association)	44
<b>MR N CUTLER</b> (National Farmers Union)	47
<b>MR P STEWART</b> (National Farmers Union, Scotland)	51
<b>E-mails</b>	53
<b>General discussion</b>	54
<b>TOPIC 4 - Manufacturers' list prices for prescription           only medicines in the UK</b>	
<b>MR M NELSON</b> (Investigative veterinary journalist)	58
<b>General discussion</b>	61
<b>E-mail</b>	62
<b>General discussion</b> (Continued)	63
<b>Closing remarks</b>	67

-----

1 **THE CHAIRMAN:** It is a couple of minutes early, but I think we shall  
2 start. Welcome to this public hearing being held by the  
3 Competition Commission this morning. Let me make some  
4 introductions. I am Denise Kingsmill and I am chairing this  
5 inquiry. Sitting with me is Graham Hadley, Tim Richmond, and  
6 next to him is Charles Henderson. Also sitting with me is David  
7 Smith, the team leader helping us with this inquiry. The four of  
8 us, i.e. Graham, Tim, Charles and myself make up the group that  
9 are investigating this matter. We would normally have with us  
10 Professor Alan Hamlin. Unfortunately he cannot be with us today  
11 but he will get a transcript of the proceedings.

12 This inquiry was triggered by a reference to the  
13 Commission from the Director General of Fair Trading on 9th  
14 October, under the monopoly provisions of the Fair Trading Act.  
15 We have 15 months to carry out this investigation and we are due  
16 to deliver our report on 8th January, 2003. We are well on track  
17 and it will go to the Secretary of State and will be published  
18 later on.

19 At the Commission we collect information in a variety of  
20 different ways to assist us with our inquiries. We have hearings  
21 with third parties, we have written submissions from people, and  
22 we have also received quite a lot of electronic e-mails and  
23 other communications on our website.

24 The hearing today is part of our investigations. We are  
25 hoping to have a lively debate with contributions from all the  
26 different people who have an interest in this inquiry, and we  
27 think it is a very good idea that a greater transparency in our  
28 proceedings will also assist.

29 On 16th April, 2002 we published an Issues' Letter. This  
30 sets out those matters which have been drawn to our attention as  
31 being of the most significance in this inquiry. They are  
32 numerous, but we have selected for debate today those which seem  
33 to be the most important and the ones which, perhaps are best  
34 able to be dealt with in a public way.

35 We have not formed any conclusions about any of the issues  
36 which have been put forward to us. We are still at the stage of  
37 having completely open minds. We are in the process at the  
38 moment of coming to conclusions and the contribution that those  
39 of you who are here today can make will be very significant to  
40 us in helping us to formulate robust and clear conclusions, we  
41 hope.

42 As I said, the purpose of this morning is to collect as

1 many views as we can and to hear them expressed in a debating  
2 forum. Everybody is here on a voluntary basis, and nobody will  
3 be pressed to disclose any confidential information. I will rule  
4 out of order any attempt to try and interrogate people to elicit  
5 any confidential information. I might also say that we are not  
6 here as a group to answer questions. We are in listening mode,  
7 we are here to receive answers and we are looking forward to  
8 hearing the contributions that everybody has to make.

9 I think you will probably have had a provisional agenda  
10 and you will see the topics that we have. What I want to do is  
11 to invite speakers up to give short presentations. Some of the  
12 speakers have, I think, provided notes and you should have  
13 those. After the presentations I will throw the debate open to  
14 the floor to make contributions.

15 Speakers from the floor should try and be brief, and  
16 hopefully keep their contributions to about five minutes, so  
17 that we can get through the whole of the timetable. Just raise  
18 your hand if you wish to speak, and we have roving microphones  
19 which will be brought to you if you need them.

20 It is helpful for the record, because we are making a  
21 transcript of the proceedings today, if you give your name and  
22 your organisation before you make your contribution.

23 We are having the proceedings put on to the webcast, so  
24 that it is being broadcast on the internet, so that we can open  
25 up the debate to a wider audience than those we can accommodate  
26 here today. Members of the public have the facility to send in  
27 their comments electronically during the course of the morning,  
28 and we will be able to read some of these out to feed into the  
29 debate.

30 There are also some representatives of the media present I  
31 believe and they are seated at the back of the hall and are here  
32 to listen and observe.

33 As I said, there will be a transcript of the proceedings  
34 available. After we have checked it it will be available on the  
35 website and anybody who makes a request can get a paper copy  
36 from the Commission.

37 I am told to make to formal points, namely, could you  
38 please turn off your mobile phones and also there are some fire  
39 and evacuation procedures which are in your packs, so please  
40 take note of those.

41 May I now invite Steve Dean, who is the Chief Executive of  
42 the Veterinary Medicines Directorate, to introduce the first

1 topic, which is the regulatory system.

2 [Mr Dean not present, Mr Bennett called on to make  
3 presentation]]

4 **Topic 1: The regulatory system**

5 **MR BENNETT** (Veterinary Medicines Directorate): First, let me  
6 apologise on behalf of Steve - I am sure there is a reasonable  
7 excuse why he has not made it this morning! I do apologise for  
8 this presentation because it is based on a rough outline of what  
9 he was going to say. So please, I would be grateful if you would  
10 bear with me.

11 The issue is the regulatory system in the UK. The aim of  
12 the system is the protection of human health, animal health and  
13 welfare and the environment, and to harmonise the rules within  
14 the European Market. More recently attempts have been made to  
15 address the issue of availability of veterinary medicines,  
16 especially for minor species.

17 The regulatory system is founded upon the satisfactory  
18 assessment of three principles of which I am sure you are all  
19 aware. First, safety, i.e. the safety of the animal being  
20 treated, and other animals with which it comes into contact. The  
21 safety of people handling, and administering the treatment and  
22 the treated animal. Safety in the case of food producing  
23 animals, of consumers of produce from the treated animal, so  
24 they are not exposed to potentially harmful residues of  
25 veterinary medicines, and safety of the environment.

26 Secondly, quality - quality in the consistency and quality  
27 of the ingredients and of the manufactured formulations of  
28 veterinary medicines assuring the relevance of the safety and  
29 efficacy assessment.

30 Thirdly, efficacy - that the claims for the veterinary  
31 medicine can be proven. The assessment includes the aspects of  
32 target animal tolerance, and so the welfare of the treated  
33 animal is assured.

34 **THE CHAIRMAN:** I have just been told that Mr Dean has arrived.

35 **MR BENNETT:** I am very grateful! [Laughter] I shall have words with  
36 him at the end of the session!

37 **THE CHAIRMAN:** Thank you very much for stepping into the breach.  
38 Now, as I was saying, Steve Dean, Chief Executive of the  
39 Veterinary Medicines Directorate.

40 **MR DEAN:** May I apologise for being late, and I notice you are  
41 little early [laughter] I am a veterinary surgeon and so we are  
42 used to being there just on time!

1 I heard Colin giving you the introduction to the three  
2 principles of safety, quality and efficacy. In addition to that  
3 of course applicants need to establish an MRL for food producing  
4 animals, and they have to prove under the system of  
5 authorisation that the MRL has been approved for the active  
6 ingredient.

7 So the MRL actually underpins the assessment of consumer  
8 safety and it allows a suitable withdrawal period to be set for  
9 each product. The regulatory structure is essentially a risk  
10 assessment and risk management process, and its intent is to  
11 minimise any risk associated with the use of veterinary  
12 medicines. The overall intention is to provide a high degree of  
13 public confidence in the use of authorised veterinary medicines  
14 in both companion and food producing animals.

15 Let me now turn to Routes to authorisation. This could  
16 take all day but it is going to take just about a minute and a  
17 half! In order to be marketed in a member state Community law  
18 requires the veterinary medicinal product be subject to a  
19 marketing authorisation granted in accordance with a number of  
20 directives and regulations but the principal ones being 2001/82  
21 EC and 2309/93.

22 The whole process recognises the fact that circumstances  
23 may differ between member states in respect, for example, of  
24 species and number of animals, animal husbandry methods,  
25 environmental conditions and disease patterns, and all of these  
26 may have an influence on the safety and efficacy of individual  
27 products.

28 The authorisation provisions of the Directive are  
29 implemented in the United Kingdom by the Marketing Authorisation  
30 for Veterinary Medicinal Products regulations 1994 (as Amended).

31 The marketing authorisations may be granted only where the  
32 applicant is able to demonstrate that the product meets the  
33 statutory requirements in respect of safety, quality and  
34 efficacy. There are in fact three procedures by which companies  
35 may apply for an authorisation.

36 The first is the centralised procedure which is  
37 essentially where a company makes an application to the European  
38 Medicines Evaluation Agency (EMEA) who co-ordinate the  
39 evaluation. If an authorisation is granted by the EMEA on behalf  
40 of the European Commission it is valid throughout the Community.

41 The centralised procedure is obligatory for products  
42 produced by biotechnology, and it is optional for innovative

1 products. Centralised products as a point of note are available  
2 on prescription only.

3 There is a national procedure which takes into account the  
4 fact that companies may have a niche market in a single country  
5 and wish to market a product in that niche market. In the UK, of  
6 course, the VMD is the competent authority dealing with national  
7 applications.

8 If the authorisation is granted it is valid only in the  
9 Member State concerned. In fact, since January, '98, member  
10 states have not been permitted to authorise products that have  
11 an authorisation in another member state.

12 National authorised products are, of course, subject to  
13 national distribution classifications, which I shall come to in  
14 a moment.

15 The decentralised procedure exists, which is also known as  
16 mutual recognition. Here the marketing authorisation holder may,  
17 if they have a national authorisation already, apply to other  
18 member states for mutual recognition of that authorisation. But  
19 the authorisation in the second Member State (or third or  
20 fourth) is granted by that Member State and again is subject to  
21 national distribution classification.

22 Each of those three procedures contributes to the creation  
23 of a harmonised market in the Community, a centralised procedure  
24 allowing companies to have a single authorisation throughout the  
25 Community; a national procedure permitting small niche markets  
26 to be developed, and it is also the procedure that starts the  
27 mutual recognition procedure where the company has an  
28 opportunity to have the authorisation developed across Europe at  
29 its request.

30 For a number of years the European Commission has  
31 introduced legislation with the aim of progressively harmonising  
32 controls on veterinary medicines throughout the EU and the  
33 introduction of the centralised and decentralised authorisation  
34 procedures are examples of such measures.

35 The European Commission have recently undertaken a review  
36 of the current procedures and this is, as we stand, under some  
37 considerable discussion at this time, and amendments have been  
38 proposed to legislation.

39 One point I should make is that there has been little  
40 harmonisation for long established national products. These are  
41 products that were authorised prior to the European procedures  
42 coming into force and there has been no incentive for the

1 holders of such marketing authorisations to act any differently.  
2 Therefore, a large number of veterinary medicinal products  
3 remain as nationally authorised products and this perhaps  
4 represents a major area where price differentials may exist.

5 The availability of veterinary medicines is the next part  
6 that I would like to turn your attention to and for food  
7 producing animals there is certainly a case where availability  
8 is a problem, where the market return is poor, and minor food  
9 producing species are a major focus of this attention. It is  
10 certain that the establishment of MRLs adversely affected the  
11 availability of medicines for minor species, minor food  
12 producing species.

13 However the European Commission has recently agreed an  
14 initiative to extrapolate the data to extrapolate MRLs from  
15 major food producing species to relevant minor species. In  
16 addition, where no veterinary medicine exists to treat a  
17 particular condition in the species, then under Community  
18 legislation member states are allowed to permit veterinary  
19 surgeons, to avoid unacceptable suffering, to administer a  
20 product under what is known as a "Cascade". This should be to a  
21 particular animal or a small number of animals on a specific  
22 holding, and there is a descending order of preference, and I  
23 will just run through it very quickly.

24 The first is that the veterinary medicine used should be  
25 authorised in the Member State in the UK for example, for a  
26 different condition or a different species. Alternatively, if  
27 there is no veterinary medicine available then human medicine  
28 may be used and if neither of those is available then a medicine  
29 made up on a one-off basis by the veterinary surgeon, or a  
30 properly authorised person in accordance with the veterinary  
31 surgeon's specification. That is generally known as the  
32 "Cascade".

33 When using the Cascade for food producing animals,  
34 veterinarians may use only products that already have active  
35 ingredients in existence in medicines authorised for food  
36 producing species. In other words, there needs to be an MRL in  
37 place otherwise the veterinary surgeon will not be able to set a  
38 withdrawal period and there are minimum withdrawal periods set  
39 down in the Cascade.

40 All food producing animals are included and the definition  
41 of "food producing animals" includes bees and horses, and it is  
42 probably the latter that has caused most controversy.

1 Another measure that deals with availability is the  
2 ability to parallel import veterinary medicines that are  
3 authorised in two or more member states, and this relies on the  
4 fact that the product being parallel imported is identical to  
5 the product on the Member State market, and of course we need to  
6 be assured that such products that are parallel imported are  
7 suitably labelled for use in the Member State where the use is  
8 intended.

9 Before I conclude, I should like to touch on one or two  
10 other issues. I think we should talk about the classification  
11 system. The current UK system allows for a veterinary medicine  
12 to be classified as follows:

- 13 \* the general sales' list category which may be sold through  
14 any outlet.
- 15 \* the prescription only medicine which may be sold only by  
16 pharmacists or prescribing veterinarians.
- 17 \* the pharmacy category [the P category] which may be  
18 dispensed by pharmacists without a prescription.
- 19 \* the Pharmacy and Merchants' List [PML] which may be sold  
20 by pharmacists or suitably qualified persons through  
21 agricultural merchants, businesses, and in certain  
22 circumstances through registered saddlers.

23 All newly authorised products are required to be  
24 classified, at least initially, as POM. This is in the  
25 Directive. But this may be reviewed at a later stage - somewhere  
26 in the first five years is the norm - resulting in a lower  
27 classification but only if it can be demonstrated that safety  
28 will not be compromised.

29 The definition of a prescription only product is contained  
30 in Council Directive 2001/82 and the classification of products  
31 other than POM is a matter for national authorities to  
32 determine, and as a result controls on supply differ widely  
33 throughout the Community.

34 There have been attempts by the Commission to harmonise  
35 the classification of veterinary medicines, but it has so far  
36 proved unsuccessful because of these widely different  
37 distribution systems across the Community.

38 A final word, if I may, on the international  
39 harmonisation. The Veterinary International Committee on  
40 Harmonisation [VICH] is producing, and has produced, a series of  
41 guidelines intended to harmonise data requirements  
42 internationally, but it is too early really for those to have

1 had a significant effect on EU authorisations, although many of  
2 those guidelines are now in force.

3 There are regional differences worldwide, even more so  
4 than across Europe in terms of animal husbandry, and it is  
5 recognised also that species, numbers of animals to be treated,  
6 environmental conditions and disease patterns may affect the  
7 safety and efficacy of these individual products, and VICH tries  
8 to take that into account.

9 I think that completes all I wish to say, and thank you  
10 for giving me the opportunity.

11 **THE CHAIRMAN:** Thank you, Steve. Before you sit down I wonder if I  
12 might just ask you to address two points. First, we are after  
13 all an economic inquiry here and I wondered if you would like to  
14 comment on the extent to which you think the current regulatory  
15 system means that prices of veterinary medicines are higher in  
16 the UK than they otherwise should be? What is it about the  
17 regulatory system perhaps that leads to this?

18 **MR DEAN:** The first comment is that if you have a regulatory system  
19 intended to deal with safety it obviously acts as a barrier and  
20 clearly when that is put into the hands of professionals you  
21 have the opportunity for there being some higher price than it  
22 would be if it was a commodity in the market place.

23 I have to say that the Veterinary Medicines Directorate  
24 does not involve itself in pricing and therefore I do not really  
25 think it is our remit to say why prices may or may not be  
26 higher, but I think we accept - and I think everyone does accept  
27 - that a regulatory system by its character raises prices. But  
28 the regulatory system should be equal across Europe. Of course,  
29 therefore, in terms of regulatory pressure it should be the same  
30 across the European Union.

31 **THE CHAIRMAN:** The second point that I wanted to ask, because it has  
32 been raised with us, is the regulatory system a bit  
33 indiscriminate in that it does not distinguish between pets and  
34 food producing animals?

35 **MR DEAN:** I do not think that is true because indeed there is a  
36 strong differentiation in the Directive. For example, we apply a  
37 different set of rules to food producing animal products because  
38 of the issue of MRLs and withdrawal periods and food safety. But  
39 the data requirements, for example, in terms of efficacy, in  
40 terms of target animal tolerance, are exactly the same. But then  
41 the argument has always been why should the pet animal suffer  
42 any less quality of medicine than the food animal, in fact, I

1 think some of the public may argue it should be quite the  
2 reverse. But as far as we are concerned, apart from the  
3 differences in terms of food safety the critical appraisal of  
4 pet and food animal medicines is exactly the same.

5 **THE CHAIRMAN:** Could I ask Philip Sketchley now come up and make his  
6 contribution? Philip is the Chief Executive of the National  
7 Office of Animal Health.

8 **MR SKETCHLEY** (National Office of Animal Health): Thank you. In the  
9 pack I have given the background to the request for our  
10 presentation so in the interests of brevity I will kick straight  
11 off with our comments.

12 Effectively, we have been asked to comment on the possible  
13 effects on competitiveness of UK medicines, and medicines  
14 availability brought about by the regulatory process. It is  
15 probably appropriate to refer at this juncture to statements  
16 from Sir John Marsh's Report:

17 *"The difficulties of moving to a single system of*  
18 *veterinary medicines authority within the European*  
19 *Community must not be allowed to disguise the importance*  
20 *of making progress in this direction. An effective*  
21 *community wide system would make a major contribution to*  
22 *the removal of illegal imports and the unauthorised use of*  
23 *medicines. This would also promote a more competitive*  
24 *medicines market but it would also increase consumer*  
25 *confidence."*

26 Obviously we need to make progress in this direction and  
27 it would require compromise and a willingness to adapt by all  
28 the member states.

29 *"Whilst the underlying principles of Community law are*  
30 *applied in all member states, national governments are*  
31 *responsible for their implementation."*

32 Obviously as Steve has mentioned in the UK this is the  
33 responsibility of the VMD.

34 *"In this country the Veterinary Medicines Directorate has*  
35 *this responsibility. Regulations, which determine what*  
36 *products can be sold and how they can reach the final*  
37 *user, have an important influence on price and*  
38 *availability.*

39 *"The development of new medicines involves costly*  
40 *processes of research, development, market authorisation*  
41 *and market launch."*

42 Therefore for NOAH members the discovery and development

1 of new products is not a certain process. Regulatory standards  
2 are obviously set high, and as data is generated many potential  
3 new products for the market place fall by the wayside, and due  
4 to the cost of getting the products to the market.

5 Obviously, the costs of these failed products must also be  
6 recovered by the industry on those products which are eventually  
7 brought to the market place. In fact, Sir John Marsh reinforced  
8 this by stating:

9 *"These costs are so high that manufacturers need a large  
10 market to justify the investment, with consequent problems  
11 for minor species and for uncommon ailments. They [the  
12 industry] also have to recoup the initial costs through  
13 the selling price of their product before generic  
14 equivalents, which have not had to face the full costs of  
15 research and development or authorisation to reach the  
16 market. Without a price sufficient to cover these costs  
17 the supply of new animal medicines would cease resulting  
18 in avoidable economic losses to farmers and a less  
19 satisfactory range of treatments to ensure welfare for all  
20 animals. Patent law and the medicine authorisation  
21 process are designed to allow an innovator to recoup his  
22 costs and, during this period the price at which the  
23 medicine is available is necessarily higher than the  
24 direct costs of its manufacture. The regulations, which  
25 protect new products affect both the price and  
26 availability of competitive products. The task force [Sir  
27 John Marsh's] had to consider whether existing rules  
28 struck the right balance between the longer-term public  
29 interest in the development of improved medicines and  
30 access by animal owners to suitable, older generic  
31 medicines at much lower prices."*

32 Therefore, for the industry we have to evaluate the time  
33 for all of these necessary regulation processes, the size of the  
34 potential market for the said product, and the time to recover  
35 the costs of research and registration.

36 Therefore, maintenance on the product on the market is not just  
37 about the known cost of annual licence renewal but also  
38 subsequent to launch manufacturers are quite rightly faced with  
39 the task of completing further studies, either those brought in  
40 by new EU directives, or in fact, as is often the case, studies  
41 requested by local national regulatory authorities. For example,  
42 there is presently a review of avermectins and milbemycins in

1 the antiparasiticide market. These additional costs have to be  
2 recouped either by increasing prices or avoiding them by  
3 deciding whether it is commercially viable to continue with a  
4 product on the market.

5 There are also ongoing major costs of generating new data  
6 for safe and effective old products already licensed on the  
7 market within the five yearly renewals. Consequently, it is the  
8 cost of creating this new data and the possibility of it not  
9 being able to meet the latest standards at the end of it, which  
10 represent the main cost of maintenance in addition to the  
11 routine annual renewal fees.

12 Within the UK the regulatory authorities are keen in  
13 requesting new data for renewals, for example, Eco-tox data,  
14 in-use shelf life, new residue depletion data, etc. and  
15 obviously all these have a cost to the manufacturer.

16 Therefore, these regulatory costs will represent quite a  
17 significant burden and whilst registration fees in themselves  
18 are not particularly expensive, the cost of excessive and  
19 perhaps on occasions unnecessary data generation, for  
20 registering new and maintaining authorised products have a  
21 bearing. Therefore, we can and have seen an attrition of  
22 products on the market because it has not been commercially  
23 effective for them to remain on the market.

24 The requirement to update dossiers for old products with  
25 proven safety and efficacy in the market for some time is  
26 obviously an additional cost. We are, of course, going through  
27 five yearly renewals in most EU countries, and in many states  
28 these appear to be a simple administrative exercise. Examples  
29 that Steve has referred to and for example- MRLs for  
30 excipients - have been requested and it questions whether that  
31 is really necessary.

32 Despite the recommendation of the EU to remove the  
33 requirement for five year renewals, within the UK we have seen a  
34 continuation of current standards to old products that have  
35 already got a proven track record both in terms of safety and  
36 efficacy.

37 So for low turnover, niche products the investment needed  
38 to meet these requirements is often commercially not justified  
39 and is an example perhaps of the 'gold plating' of regulations.

40 Obviously it has to be said that NOAH members and the  
41 whole of the industry respect regulations, they are needed there  
42 for the safety of the consumer, but obviously we accept them

1 reluctantly when they may be excessive or unnecessary when  
2 compared to other member states. These will obviously have a  
3 bearing on comparable prices across Europe.

4 We accept that a lot of the regulatory burden is set  
5 within the EU, and obviously outside the remit of this  
6 particular UK hearing. Nevertheless, there are factors that have  
7 to be considered. A classic example, and one that Steve referred  
8 to, is MRLs in the equine market sector. Many manufacturers have  
9 been requested to produce data to this effect and are faced with  
10 the inevitable task of saying would it be really commercially  
11 viable to maintain those equine products on the market? Sadly,  
12 we have seen quite a number of products removed from the market  
13 for those reasons.

14 So really regulation has to be balanced with the  
15 commercial reality that manufacturers are not in the business  
16 for altruistic reasons. In fact, Sir John Marsh went on to  
17 recommend that the regulatory authorities examine their own  
18 procedures for dealing with applications for products whether  
19 they be through decentralised procedures or whatever, to ensure  
20 that there are no unnecessary obstacles put in the place of  
21 registering products through mutual recognition.

22 The Cascade has also been referred to and there was a  
23 recommendation by Sir John Marsh that:

24 *"...the Minister encourages the European Commission to*  
25 *amend existing legislation to allow veterinarians to*  
26 *prescribe generic treatments after consultation, of*  
27 *course, with the owner."* It has to be said that the  
28 industry does not support this view. In the short term it  
29 may be beneficial for prices but, of course, in terms of  
30 long term medicine's availability there could be  
31 consequences, because it would not encourage the research  
32 and development based companies to develop new products  
33 and treatments that will be required for the market.

34 The other point that has to be mentioned is very often the  
35 veterinary manufacturers will take novel products from the human  
36 pharmaceutical market and do the necessary research to introduce  
37 them into the veterinary sector. There have been occasions with  
38 products already manufactured where additional quality data has  
39 been required, obviously we always expect safety and efficacy to  
40 be requested in new species, but obviously if additional quality  
41 data of manufacturing is required, of products already being  
42 manufactured in the human pharma sector, and already been used

1 for several years, that will obviously add additional cost.

2 In the short term that may be a solution to reducing  
3 costs, but we believe that it will not give innovative products  
4 for the future, and address the needs of medicine's availability  
5 which is also one of the main areas for this Commission and Sir  
6 John Marsh's enquiry to look at.

7 Another example of where the standards for veterinary  
8 licence have proven too onerous is the point I mentioned before  
9 in relation to the attempted launch of human pharmaceuticals  
10 into the veterinary sector. In other words, it appears that we  
11 are trying to apply higher standards for veterinary products to  
12 the ones already available in the human sector.

13 I am conscious of time, and obviously as Steve mentioned  
14 the regulatory process is a very difficult and very detailed  
15 area, and in the short time available we probably cannot do  
16 justice to all the points, but I hope that some of the comments  
17 that I have made will give everybody a better understanding and  
18 appreciation of the costs and implications to the veterinary  
19 medicine manufacturing industry on both medicines' availability  
20 and their competitiveness in the market.

21 Thank you.

22 **THE CHAIRMAN:** Thank you, Mr Sketchley. Before you step down, may I  
23 just ask you, do you think that this is an industry which has  
24 been characterised by considerable innovation?

25 **MR SKETCHLEY:** It depends over what period of time. I think in more  
26 recent years obviously because of the costs of research  
27 innovation has, perhaps slowed, but traditionally, yes it has.

28 **THE CHAIRMAN:** Do you think that the regulatory system is working  
29 against innovation at the moment?

30 **MR SKETCHLEY:** In some aspects it is.

31 **THE CHAIRMAN:** It is also working in your view to raise prices?

32 **MR SKETCHLEY:** Not directly in terms of the registration process,  
33 but in terms of the necessary research and data that is required  
34 in order to get that registration.

35 **THE CHAIRMAN:** Thank you very much indeed. I am about to throw this  
36 topic open for discussion by the floor, but before I do so I am  
37 going to ask one of my colleagues to read out some of the e-  
38 mails that we have received from members of the public on this  
39 topic.

40 **E-Mails received**

41 **MR RICHMOND:** Linking the e-mails to the Issues Letter we have  
42 published, both of them relate first of all to are there aspects

1 | of the regulatory system in the UK that deter veterinary

1 manufacturers from applying for authorisation of  
2 medicines, and in particular because of the process does this  
3 result in fewer competing products. Also, does the  
4 classification procedure potentially give the veterinary  
5 manufacturers too much control over the classification and  
6 should the solution be to allow third parties to request  
7 reclassification?

8 One e-mail is from a dog owner who says:

9 *"I can buy Frontline over the counter from a pharmacy in  
10 France and much more cheaply than in the UK. Furthermore,  
11 in the UK I would have to pay the additional price of a  
12 consultation with the vet before I could buy it. I have  
13 been told that this has nothing to do with the safety of  
14 the drug, but more to do with the fact that the  
15 manufacturer would have to pay for a different category of  
16 licence in order to supply the public direct."*

17 The second e-mail is from a cat and dog breeder in Wales  
18 who writes:

19 *"More prescription only medicines should be available on  
20 the free market in the UK. This would give animal owners  
21 the opportunity to deal with some medicines themselves  
22 without having to pay vets' consultation fees. Why  
23 shouldn't breeders and others working professionally with  
24 animals be able to vaccinate their own animals and have  
25 some type of antibiotic available in the same way as  
26 farmers? Further, all flea treatments and wormers should  
27 be available over the counter instead of needing a  
28 prescription."*

29 There is an e-mail is from a dog owner in Buckinghamshire,  
30 this is quite a comprehensive one:

31 *"My experience is that the restricted market for  
32 prescription only medicines operates against the public  
33 interest by enabling veterinary practitioners to  
34 overcharge for the prescribed products that they also  
35 dispense. If greater competition existed for the supply of  
36 these products veterinary practitioners would be obliged  
37 to reduce their charges for them. The mechanisms which I  
38 favour for introducing greater competition are:*

- 39 1. *Requiring veterinary practitioners to furnish a*  
40 *client with a written prescription for any medicine*  
41 *prescribed.*
- 42 2. *Making POMs more widely available through a variety*

1 of retail outlets, all of whom should be empowered  
2 subject to appropriate evidence of staff training to  
3 dispense veterinary prescriptions.

4 3. Undertaking a thorough review of all veterinary POMs,  
5 if necessary revising the applicable legislation with  
6 a view to removing the POM restrictions from as many  
7 veterinary medicines as possible.

8 4. Authorising the supply of veterinary medicines direct  
9 to recognised animal welfare organisations and  
10 licensed breeders under appropriate veterinary  
11 supervision."

12 **THE CHAIRMAN:** Thank you. Some of those comments went a little bit  
13 further and wider than the discussion of the topic at hand, but  
14 nevertheless that does represent some interesting comments.

15 I would like to throw it open to the floor now and as I  
16 say please concentrate on the issues raised by the speakers and  
17 by the issues relating to the regulatory framework in which this  
18 industry operates. I will take comments from anyone from the  
19 floor although I have one or two people that I might ask to  
20 speak if there is a general desire to make comments.

21 Has anybody any comments about the regulatory framework on  
22 the prices of veterinary medicines, or any other comments they  
23 want to make about the regulatory framework?

24 I wonder if anybody from the Royal Pharmaceutical Society  
25 would like to speak? Mr Jobson, would you like to have something  
26 to say?

#### 27 28 **General Discussion**

29 **MR JOBSON** (Jobsons Farm Health): Thank you. I think that the e-  
30 mails we have received are very pertinent and I trust that we  
31 will address those issues later in the morning, particularly  
32 relating to the regulatory issues. There are some issues that  
33 have been put into the Competition Commission statement,  
34 particularly suggesting that there be the issue of prescription  
35 only medicines by veterinary surgeons without need for a prior  
36 diagnosis. This is quite pertinent in terms of the role of the  
37 pharmacist in the supply of medicines in that the case for  
38 pharmacy is that there are certain products that require advice  
39 input in terms of the appropriate use, methods of administration  
40 and so on, or other factors relating to interactions with other  
41 medication where the pharmacist could provide that advice, but  
42 there is no need for a prior diagnosis. Perhaps this alludes to

1 the fact that there is a need to make the available choice wider  
2 for consumers without the need for a prior diagnosis.

3 I would suggest in that situation that the product not be  
4 classified as prescription only, but be classified as a pharmacy  
5 only, or indeed as a pharmacy only exempt classification which  
6 has been suggested to follow the Irish example, with particular  
7 safeguards. These particular products would be handled by the  
8 pharmacist.

9 **THE CHAIRMAN:** Can you give some examples of the kind of products  
10 that you are thinking of, or the kind of treatments that you are  
11 thinking of?

12 **MR JOBSON:** These products, as I say, would not require a prior  
13 diagnosis, they are prophylactic medicines. For example, on the  
14 farm animal side one could be looking a certain live vaccines,  
15 viral vaccines that could be used in the prevention of Orf,  
16 where there is already Orf present on the farm, where it is a  
17 routine procedure, the farmer has been using for many years, and  
18 there are probably situations for breeders and for prophylactic  
19 treatments of small animals also.

20 **THE CHAIRMAN:** Such as worms and fleas?

21 **MR JOBSON:** Flea preparations and the like.

22 **THE CHAIRMAN:** I might say that it is in relation to worming and flea  
23 treatments that we have had the most number of letters.

24 **MR JOBSON:** Recently, I was speaking someone who ran a cattery who  
25 was constantly having cats coming in to the cattery infested  
26 with fleas, had been used to using a particular flea preparation  
27 but went to their local veterinary surgeon to request a  
28 prescription to have it dispensed by a pharmacy and was quoted a  
29 prescription fee of £50 and the comment was made that the reason  
30 that it was so high was simply to compensate for the lost profit  
31 on the sale of the medication.

32 **THE CHAIRMAN:** Thank you very much, Mr Jobson. The past President of  
33 the British Veterinary Association I understand wanted to speak?

34 **MR TYSON** (Past President BVA): Going back to the cost of  
35 regulation, which is what I think this section is about, as a  
36 consumer of restaurant food I expect those premises to be  
37 regulated and inspected, and duly made safe - or as safe as they  
38 can be - for me when I go for my lunch after this meeting.  
39 Somebody has to bear that cost. If it is the local authority I  
40 am paying it through my Council Tax. If the restaurant owner has  
41 to pay the Council for that then I am paying for it in my food.

42 In terms of veterinary regulation it must be right that

1           there is regulation because we cannot just be giving  
2 anything to anything, and the cost therefore has to be borne by  
3 somebody. I think it is the case in this country that it is  
4 self-financing, in other words the manufacturer is paying  
5 therefore the consumers are paying in the end through the  
6 charges that have to be made.

7           Steve, in answer to your question, very carefully said  
8 that this "shouldn't" make a difference over Europe. Now I am  
9 not sure whether "shouldn't" means "doesn't" or not. My  
10 understanding is that Governments may pick up the bill in other  
11 parts of Europe rather than the industry itself, and that  
12 obviously does make a difference, and I think that is an issue  
13 across Europe, the cost of regulation and who bears it. We have  
14 argued for a long time that there really should be just one  
15 hurdle. We have heard all sorts of reasons why there should not  
16 be, but if there were it would reduce the cost of regulation  
17 across Europe and therefore on the other side of the coin - also  
18 very important - reduce the effect on the availability of new  
19 product, and that is a really serious issue both for pet vets  
20 and food producing vets particularly.

21 **THE CHAIRMAN:** Thank you. The issue seems, however, to make certain  
22 that the balance is struck between appropriate regulation  
23 designed to protect both human and animal health but at the same  
24 time not excessive regulation which then does nothing to make  
25 medicines more available, and more cheaply available to the  
26 people. It seems that there needs to be an appropriate balance  
27 struck. Is that what you would say?

28 **MR TYSON:** Yes, I think that is the case, but also if we go back to  
29 the comparative cost, you have a bar chart in here comparing our  
30 costs with France and the Netherlands. I do not know who bears  
31 the cost of regulation in those countries, whether it is the  
32 pharmaceutical companies and therefore the consumer, or whether  
33 in individual countries there is a sort of back door subsidy, if  
34 you like, because Government bears the cost.

35 **MR CUTLER (NFU):** To continue David Tyson's point of passing the  
36 cost of regulation through to the consumer. In the case of the  
37 food producing sector of course farmers are then unable to pass  
38 on that regulatory cost because of the structure within  
39 agriculture as it stands at the moment. It is the common  
40 misconception that we can pass on increased regulatory costs,  
41 but we cannot.

42 **MR RICHMOND:** There does not seem to be any response as to why third

1 parties should not be able to request re-classification. It does  
2 come up a lot.

3 **THE CHAIRMAN:** Does anybody have any comments on that part of the  
4 regulatory system, why third parties should not be able to  
5 request that drugs be re-classified?

6 **MR MILLER (BVA):** A very brief point which is that we should all  
7 realise that the Body that determines the appropriate  
8 distribution route is colleagues in the Veterinary Medicines  
9 Directorate advised by the Veterinary Products Committee. That  
10 is a fundamental fact that we should all remember when we are  
11 talking about this.

12 **THE CHAIRMAN:** Yes, what we as a Commission may want to get to the  
13 bottom of is the extent to which the regulatory system impacts  
14 on the prices paid by the consumer. There may be offsetting  
15 benefits for that increased price, but we need to understand  
16 exactly how the regulatory system impacts on prices to the  
17 consumer, and what effect that has overall.

18 **MR MARSDEN (Royal Pharmaceutical Society of GB):** I would like to  
19 question Steve Dean as to whether the interpretation of EU Rules  
20 actually increases the cost of production of medicines through  
21 the regulatory system. Is the interpretation of, say, the word  
22 "prescription" the same throughout the EC and is the  
23 interpretation followed through, does the VMD develop  
24 interpretations of rules effectively to reduce the costs? Is  
25 that clear enough?

26 **THE CHAIRMAN:** By all means, would you like to respond to that?

27 **MR DEAN (VMD):** Yes, of course interpretation does have an effect,  
28 but we certainly do not interpret the rules to reduce cost. We  
29 interpret the rules to maintain safety. When the European system  
30 started clearly there were 15 interpretations of the rules in  
31 terms of veterinary medicines.

32 One of the reasons that the veterinary mutual recognition  
33 facilitation group was put together, which has a role to play in  
34 mutual recognition, is to try and bring the thinking of those 15  
35 member states together, and I would say since 1998 it has done  
36 so. So interpretation is a problem across Europe.

37 You asked about categories as well. The answer is and I  
38 tried to allude to it in my presentation, that the  
39 categorisation of products is regarded very differently across  
40 Europe and, therefore, for example in Germany nearly all  
41 veterinary products are prescription only unless they are on  
42

1 free sale - there is no PML category.

2 Indeed, the PML category really only exists in the UK but  
3 France and Ireland have similar schemes but not quite the same.  
4 So categorisation is regarded differently across Europe and that  
5 does raise some problems. But you should be aware that the  
6 Commission are pressing very hard for the prescription only  
7 category to be more broadly applied rather than relaxed because  
8 the Commission are interested very much in terms of safety,  
9 predominantly human safety, and they regard the correct category  
10 for the vast majority of veterinary medicines would be  
11 prescription only. I hope that answers your question.

12 **THE CHAIRMAN:** Thank you. Any more comments on that issue? Are there  
13 any animal owners present who would like to comment upon the way  
14 in which this impacts upon them at all - the prescription only  
15 classification? [No comments] There will be an opportunity  
16 later on, when we have heard all of the topics, to be able to  
17 bring up general points that have been raised.

18 I am going to move on to the next topic, which is related,  
19 but it is the dispensing of prescription only medicines by  
20 pharmacists and I am going to ask Trefor Williams of the National  
21 Pharmaceutical Society to make the opening points.

22 **Topic 2 - Dispensing of prescription only medicines by pharmacists**

23 **MR WILLIAMS** (National Pharmaceutical Association): I apologise for  
24 the absence of my colleague, John D'Arcy who is unable to  
25 attend. He and I have worked very closely on organising this  
26 presentation, although I have not quite the problem that the  
27 earlier speaker had.

28 I would like to take the first half of this slot dealing  
29 with prescription only medicines as an over view. I have some  
30 colleagues, fellow pharmacists from the Royal Pharmaceutical  
31 Society who will delve more into specific areas, particularly  
32 commenting on the statement of issues that you put out earlier.

33 I want to set the background which hopefully will more  
34 widely inform the people here of how pharmacy can help work with  
35 veterinary surgeons, work with consumers, work with  
36 manufacturers and suppliers to improve access to medicines  
37 whilst retaining all the requirements of safety and efficacy.

38 There are about 5,000 of community pharmacies in the UK.  
39 They own some 12,500/13,000 shops. They are in villages,  
40 suburban parades, high streets and shopping centres. Almost all  
41 of those are in voluntary membership of our association, so we  
42 look after Lloyds, Moss who have some 1,000 or more branches. We

1 look after the regional multiples and we look after the 4,000  
2 pharmacies who own perhaps one shop each. What I am giving you  
3 is a picture of convenience, accessibility both in terms of  
4 locality and opening hours.

5 Those pharmacies are principally, to the extent of  
6 probably 90 per cent. of their business involved in healthcare.

7 The pharmacists themselves are both academically and  
8 professionally qualified in pharmacy and that, of course,  
9 includes physiology and pharmacology. They are registered by  
10 law, just the way veterinary surgeons are, and they are  
11 regulated by a professional body under a Royal Charter, just the  
12 way veterinary surgeons are. Their premises are regulated, and  
13 inspected by law officers. So in all that they do, safety  
14 underpins their activities. They have a duty under the Code of  
15 Ethics of Pharmacy to act only in areas where they are  
16 competent. So it is not a question of if pharmacies were to  
17 start looking at broadening the care they are able to provide to  
18 either humans, or animals, they can do it willy-nilly. They must  
19 be competent in the area in which they intend to work.

20 Their basic training ensures that they have the scientific  
21 knowledge to deal with a variety of veterinary situations. Just  
22 as importantly they have the ability and understanding to know  
23 when to refer. They are doing that in their every day lives in  
24 terms of human medicines. They are dealing with patients, they  
25 are dealing with consumers, and they know when to stop. I think  
26 that is something often misunderstood.

27 The community pharmacy is well able to deal with animal  
28 issues, particularly the dispensing of prescriptions for  
29 prescription only drugs and handling requests for medications  
30 that are classified less severely, and they thrive in a  
31 competitive retail environment - that ensures the consumer gets  
32 value for money and it also ensures that consumers can access  
33 that sort of care for animals in their own neighbourhood on any  
34 day of the week and at almost any time.

35 We see that there are three key barriers to pharmacies  
36 meeting the needs of consumers:

- 37 \* Few prescriptions leave the veterinary surgery and are  
38 expensive when they do.
- 39 \* Pharmacies find it very difficult to get supplies of  
40 prescription only medicines, and pretty hard to find  
41 efficacious non-prescription only medicines as well.
- 42 \* Decisions on how widely available a drug is is solely in

1 the hands of manufacturers. The incidence of re-  
2 classification from POM down to P or PML seems, perhaps I  
3 can say, inexplicably rare.

4 If I can go through these issues - they are all very much  
5 tied together. On the prescription issue, we are not talking  
6 about any campaign to stop veterinary surgeons properly  
7 administering drugs to their animal patients in consultations,  
8 in visits to farms, or stables, then obviously anaesthetics,  
9 injected pain relief, other drugs for oral and topical  
10 treatment, nobody would consider it would be reasonable for a  
11 veterinary surgeon to always resort to issuing a prescription  
12 instead of treating on the spot.

13 But for repeat medication for chronic conditions, perhaps  
14 arthritis, diabetes, heart conditions, and for treatments  
15 particularly as you said, Chairman, for worms, topical  
16 parasites, we believe there is plenty of scope for client care  
17 by the issue of prescriptions.

18 Our perception is that in these circumstances it is common  
19 practice in veterinary surgeries for medications like these  
20 (particularly on the parasitic and worm issues) to be supplied  
21 on request on turning up at a surgery. It might not be the first  
22 visit because of course there needs to be examination of the  
23 animal and due consideration. But if I want to get some more  
24 anti-parasitic external treatment for my animal I can get it  
25 over the counter from the receptionist.

26 Let us just look at what is involved in writing a repeat  
27 prescription. Somebody at the surgery must take a message - in  
28 human medicine typically it is a phone call and "I will come and  
29 collect it next Tuesday", or maybe the patient sends in a  
30 stamped addressed envelope.

31 The client record obviously needs to be consulted and a  
32 prescription form filled out and then signed by a vet. An  
33 administration fee is a reasonable thing to provide on that  
34 occasion. It is also perfectly legitimate for the instruction to  
35 be "repeat monthly for three months", so that the animal owner  
36 does not have to spend too much money on the drugs in one go but  
37 does not have to visit the surgery unnecessarily. You get the  
38 situation where there is very little hassle, very little time  
39 involved, good client care, and good value for the consumer.

40 It is worth nothing that the numerical reality is that the  
41 location of community pharmacy is likely that it is far more  
42 convenient to visit a pharmacy than to go and traipse to the

1 veterinary surgery. When it comes to convenience the owner will  
2 find it easier to leave a prescription at a local pharmacy, and  
3 pick it up later than go to the vet, ask for the medication and  
4 either have to wait until a vet is available, or hang around  
5 while the receptionist can deal with it.

6 We have, in fact, submitted a dossier of evidence, and I  
7 would like point out two issues raised in that - one was  
8 mentioned earlier this morning. It does seem that on the rare  
9 occasion that a prescription is issued the charge for writing  
10 the prescription is often designed to ensure that when it is  
11 added to the cheaper price that a drug may be available through  
12 a pharmacy it would have been cheaper for the patient in the  
13 first place to have got the medication from the veterinary  
14 surgeon, and that does seem a little unfair to us.

15 It is also a fact that I have seen misleading statements  
16 written by veterinary surgeries suggesting that not only must  
17 they write prescriptions - one prescription per drug and  
18 therefore make multiple charges for writing those prescriptions  
19 - but also that it is actually illegal to write repeat  
20 prescriptions. That is quite clearly not the case.

21 If I move on to obtaining supplies, which is my second key  
22 point. As well as supplying vets and pharmacies and merchants,  
23 manufacturers can supply traders and dealers who hold the  
24 required authorisations under both the Medicines Act and the  
25 Misuse of Drugs Act. The same Acts of Parliament actually endow  
26 both veterinary wholesalers, and human pharmaceutical  
27 wholesalers. Yet, when an authorised wholesaler is in the  
28 business of supplying pharmacies, getting his hands on an  
29 account with a manufacturer seems fraught with difficulties. We  
30 are aware of one such wholesaler who happens to be a  
31 pharmaceutical company who does hold a wholesaler Dealers'  
32 Licence, but when he was trading as "Acme Pharmacy" shall we  
33 say, he could not get the supplies. He changed his name to "Acme  
34 Veterinary Supplies" and he was able to get supplies. I would  
35 hate to suggest why.

36 Similar situations exist for a pharmacy obtaining trading  
37 terms with a veterinary medicines' wholesaler. We have evidence  
38 that requests are constantly made of manufacturers and I have  
39 been unable to unearth a single occasion on which there has been  
40 a written refusal and any reasons given as to why that pharmacy  
41 wholesaler has been unable to get an account.  
42

1 It is fair to say there are limited sources are a pharmacy can  
2 obtain supplies. There are particularly specialist veterinary  
3 pharmacies who do hold a wholesaler Dealers' Licence and have  
4 managed through the force of their business in farm supplies to  
5 get supplies through. But even a consumer giant like Safeway,  
6 the supermarket chain, which does operate some 100 in-store  
7 pharmacies, finds it only practical to get veterinary medicines  
8 from one wholesaler, and that wholesaler is a veterinary  
9 medicine wholesaler that is a pharmacy.

10 It has to be said that the specialist pharmacies still  
11 find themselves with difficulties in opening those wholesale  
12 accounts. We even have a rather incongruous example where a  
13 veterinary vet wholesaler will buy a particular poison from a  
14 veterinary pharmacy wholesaler, but he will not open an account  
15 with that pharmacy wholesaler.

16 Let us take the opportunity to move along to the  
17 reclassification or the de-classification of veterinary  
18 medicines and compare the situation with human medicines. The  
19 Medicines Control Agency is the direct equivalent in this  
20 respect of the VMD.

21 On the MCA website it says that reclassification is  
22 normally requested by the licence holder and that any interested  
23 party can do so as well. An "interested party" would certainly  
24 include a trade association or other major interested parties  
25 and it might include an organisation such as ourselves. If we  
26 are to apply a similar regimen in veterinary medicines, an  
27 animal welfare charity might be an interested party because it  
28 would be keen to control costs.

29 We then start to look at why human pharma companies look  
30 to reclassify their products downwards. Once all relevant safety  
31 issues have been resolved it is a straight forward commercial  
32 decision - wider availability of a former POM drug leads to  
33 greater exposure to the consumer, and hence increases sales.  
34 That situation can certainly apply in veterinary medicines  
35 because pharmacies are available to provide the safety back up.

36 So we then need to ask why animal health divisions of the  
37 same manufacturers are not interested in declassification? The  
38 same commercial environment certainly exists, and as somebody  
39 has already said one could argue that consumers are sometimes  
40 prepared to spend more on pet care than they are on human  
41 healthcare. We thus have to consider that there must be  
42 imperatives operating within the animal healthcare market that

1 do not exist in the human healthcare market.

2 Our contention is that there is unjustifiable and over-  
3 protective legislation that maintains a restrictive relationship  
4 between the current stakeholders in the provision of drug-  
5 related healthcare for animals, and this does not benefit the  
6 consumer.

7 To conclude I would like to visit the market as though it  
8 were a new market, not an existing market - let us assume we  
9 have an unfettered market place, and the players in that would  
10 be the consumers or the clients, the end suppliers to those  
11 consumers, the distributors and the manufacturers. The clients  
12 need confidence in their supply, the brands, they need value,  
13 they need freedom of choice, and that can be best met through a  
14 level playing field in which marketing authorisations are less  
15 restrictive and supplies available from differently, but  
16 appropriately qualified people: veterinary surgeons, pharmacies,  
17 merchants and perhaps even pet shops.

18 The end supplier needs to prosper by giving good service.  
19 Veterinary surgeons achieve it through quality of consultation  
20 advice, surgery and administration of medication. Pharmacies  
21 achieve it through their ready access, their "open door/no  
22 appointment" approach, their background as scientists and  
23 professionals, and by the supplying of appropriate products at  
24 competitive prices with referral back to the veterinary surgeon  
25 where necessary. At more basic levels, other end suppliers could  
26 similarly benefit the consumer.

27 The distributors will prosper by the efficient supply of  
28 the greatest number of products to the end suppliers in their  
29 locality. Delivery of extra products at extra points on van  
30 routes certainly increases income, but I suggest the costs are  
31 only marginally increased. Clearly manufacturers prosper by  
32 exposing as many of their products as possible to the widest  
33 possible consumer audience.

34 I believe that this market could be the market for  
35 veterinary medicines by insisting that veterinary surgeons be  
36 prepared to issue prescriptions for drugs which do not have to  
37 be administered during consultation, and that they make their  
38 clients aware that this is the standard procedure, not the  
39 exception. Likewise, for client convenience, and to limit the  
40 time spent on administrative tasks, veterinary surgeons should  
41 consider carefully the use of repeat prescriptions.

42 Veterinary surgeons should certainly be permitted to

1 charge administration fees for those prescriptions, but they  
2 must be realistic and an inconsequential part of the overall  
3 charges.

4 We believe that each of these steps can be dealt with by  
5 firm and clear instruction given to the profession by their  
6 Royal College.

7 Our other two points are that this Commission has the  
8 opportunity to forbid manufacturers from refusing to supply  
9 holders of the Wholesaler Dealers' Licence subject only to  
10 credit referencing and compliance with fair and open trading  
11 terms. It also has the opportunity to open up the regulatory  
12 procedures applied by the VMD so that consideration of de-  
13 classification can be initiated by interested parties, not just  
14 the licence holders.

15 Thank you.

16 **THE CHAIRMAN:** Thank you, Mr Williams, that is very helpful. I am now  
17 going to call upon Mr Green, from the Royal College of  
18 Veterinary Surgeons, to respond to some of the points there, and  
19 then following that I will call upon one of the representatives  
20 from the manufacturers. We will certainly be calling up on the  
21 Pharmaceutical Society as well to speak, but I think it is  
22 appropriate now to let these other Bodies respond, initially.

23 **MR GREEN** (President, Royal College of Veterinary Surgeons): First  
24 of all I think I should outline the role of the College and how  
25 we impinge upon the present proceedings today.

26 We are responsible under the Veterinary Surgeons Act, 1966  
27 for supervising veterinary undergraduate education, maintaining  
28 the register of qualified veterinary surgeons and overseeing  
29 their conduct. No veterinary surgeon can practise in the UK  
30 without being a member of the RCVS. Of the 19,500 approximately  
31 who are on the register, approximately 10,000 are in general  
32 practice.

33 We have quite a narrow role in relation to the conduct of  
34 our members. The Disciplinary Committee of the College has power  
35 to remove members from the Register, or suspend their  
36 registration for a period if they are convicted of an offence  
37 which renders them unfit to practise veterinary surgery  
38 (including medicine), or they have been guilty of disgraceful  
39 conduct in a professional respect. There is actually no  
40 statutory role for issuing advice or laying down rules for the  
41 guidance of the profession. Nevertheless we do that. We do offer  
42 guidance - The Guide To Professional Conduct, which is also on

1 our website goes well beyond what members need to observe in  
2 order to avoid any charge of disgraceful professional conduct,  
3 and it covers the whole area of relations with clients,  
4 responsibilities towards their patients, towards the general  
5 public, and under the law.

6 Turning specifically to veterinary medicines, the Guide  
7 draws attention to the law on the use of veterinary medicines.  
8 Guidance is given on the interpretation of the requirement of  
9 the Medicines Act, namely, that medicines dispensed by  
10 veterinary surgeons should be for animals under their care. This  
11 care, of course, includes the welfare of these animals. It also  
12 includes attention to possible resistance to products that might  
13 be used, so that particular attention is drawn to the choice of  
14 medicines, including the requirement to select a product  
15 authorised for use in the target species for the condition being  
16 treated, and it really must work - that is the object of the  
17 exercise. Where there is no product, as Steve Dean has already  
18 said, we can have the alternative of working within the  
19 "cascade", and he has told you of the AMELIA 8 guidance, which  
20 we also incorporate as an annex to our Guide.

21 We do give the following guidance on the dispensing of  
22 veterinary prescription only medicines.

23 *"Veterinary surgeons are encouraged to make their clients*  
24 *aware that veterinary medicines may be obtained on*  
25 *prescription from other suppliers, for example pharmacies,*  
26 *and should not unreasonably refuse to supply prescriptions*  
27 *if clients wish to provide veterinary medicines from other*  
28 *suppliers. A reasonable charge may be made for the*  
29 *prescriptions, which may only be issued for animals under*  
30 *the care of the prescribing veterinary surgeon."*

31 One of the problems that we have found, and this is only  
32 as anecdotal as the rest of the stuff that we have heard this  
33 morning, we have three instances reported to us where  
34 pharmacists have dispensed generic products in response to a  
35 veterinary prescription. This is not permitted under present  
36 law. Nevertheless on the human side it is permitted. So they  
37 have tended to adhere to this sort of advice. I think this  
38 results from a real problem that the pharmacists have at the  
39 moment. It is being discussed as we speak at the Royal  
40 Pharmaceutical Society between their representatives, and our  
41 Assistant Registrar, who appeared before you before (and who is  
42 also himself a pharmacist) about the competence of pharmacists

1 to handle veterinary medicines. There are very few who have  
2 taken the necessary qualification or continuing professional  
3 development to do this. Therefore, this is one of the matters  
4 that the pharmacists should address if they wish to dispense  
5 veterinary medicines and give the advice that we have just been  
6 told is available. I think that is a rather "gold plated" idea,  
7 actually I do not think pharmacists can cope with this  
8 particular problem at the moment. Nevertheless it is available,  
9 I know, and therefore they should, perhaps, pursue this. That is  
10 one thing I would like to say in response to what has been said  
11 this morning.

12 We also offer guidance on the fees that a veterinary  
13 surgeon should charge, because this appears later in your  
14 document concerning the relationship between goods and services  
15 and the charges, and the balance between the two. We said:

16 *"All invoices should be itemised showing the amounts*  
17 *relating to goods and services provided by the practice.*  
18 *Fees for any outside services, any charge for additional*  
19 *administration and other costs to the practice in*  
20 *arranging such services should be shown separately".*

21 That is our advice. At the moment we are in the process of  
22 investigating one particular case where this has not been done  
23 and we are taking it very seriously indeed.

24 I do not think I have any further comments to make about  
25 our particular role in this instance.

26 **THE CHAIRMAN:** Thank you very much. I am going to call on Simon  
27 Evans from Dechra Pharmaceuticals PLC to make a contribution in  
28 this area, and then I will go to the Royal Pharmaceutical  
29 Society, to Nigel Graham to make some comments before I throw it  
30 open to the floor.

31 **MR EVANS** (Dechra Pharmaceuticals PLC): Thank you. If I can make it  
32 clear that I am looking at the supply of veterinary medicines  
33 purely from a wholesaler's point of view, not from a  
34 manufacturer's point of view or clearly the ultimate supply to  
35 the end user. I am not going to touch on various clinical issues  
36 that have been raised by the two previous speakers.

37 If I start by reminding everyone the role of wholesalers,  
38 because wholesalers exist only if they supply value to the  
39 supply chain. What actually wholesalers provide is an efficient  
40 distribution system for veterinary medicines between  
41 manufacturers and veterinary practices. What they offer, firstly  
42 to veterinary practices, is a convenient one stop shop ordering

1 system which clearly saves administration costs, particularly in  
2 terms of having to order 1000 different products from 300  
3 different suppliers. Veterinary wholesalers also offer high  
4 service levels and next working day delivery in most cases,  
5 which will minimise the stock level required to be held by the  
6 veterinary practice.

7 In terms of what they offer manufacturers, clearly the  
8 removal, duplication and distribution costs in that the  
9 manufacturers themselves are not distributing to 3,500  
10 veterinary surgeries. Also, wholesalers offer buffer stocks so  
11 that if there are any short problems in production, i.e. a batch  
12 fails or whatever there is a stock in the chain so that supply  
13 is not impeded.

14 Full line wholesalers carry up to 12,000 product lines,  
15 and being a full line wholesaler we must stock the slow moving  
16 but necessary products as well as the faster moving lines.

17 There are six veterinary wholesalers in the UK, one of  
18 which supplies exclusively into Northern Ireland, the rest  
19 service England, Scotland and Wales. Of the five that do that,  
20 at least four of them would all say they are national  
21 wholesalers. Approximately 70 per cent. in sales' value terms of  
22 the wholesalers turnover is for prescription only medicines,  
23 which is the subject of the inquiry.

24 In terms of the economic factors affecting veterinary  
25 wholesalers one point, which may be obvious but should be borne  
26 in mind, is that the total wholesaler value of veterinary  
27 medicines, prescription only medicines is less than 5 per cent.  
28 of the human ethical market. Also, wholesalers retain a very low  
29 gross margin on prescription only medicines. A typical gross  
30 margin (not net margin) is 4 per cent. Also the cost base is  
31 relatively fixed within given ranges, so that you get to a  
32 certain point and if you go over that there is a step up in the  
33 cost so it is very much a stepped structure.

34 Given those low gross margins, really the wholesaling in  
35 prescription only medicines is viable only if: first,  
36 sufficient volumes are achieved; and secondly, if higher margin  
37 other products are sold alongside the prescription only  
38 veterinary medicines.

39 In terms of the potential effects of pharmacists  
40 dispensing more prescription only medicines - I do not want to  
41 touch on clinical matters, purely from a wholesaling point of  
42 view - it is not rocket science. Currently wholesalers in total

1 deliver to 3,500 veterinary practices and how things pan out  
2 from there depends on how many pharmacists actually get  
3 involved. If we take an example where all pharmacists are  
4 involved in the supply of veterinary medicines then clearly  
5 veterinary wholesalers would be delivering up from 3,500  
6 delivery points in total up to an additional 13,500. Clearly, on  
7 the gross margins that are being achieved that huge step up in  
8 the distribution capability would require significant  
9 investment.

10 The other potential route for distribution is through  
11 human wholesalers. The first thing I would say is that to date  
12 they have actually shown little interest in supplying veterinary  
13 medicines. I do not know how many know but we were very briefly  
14 part of the largest human wholesaler, AH, when Geher took over  
15 Lloyds Chemist and basically as veterinary wholesaler they  
16 certainly had the opportunity to bring us in on the human side,  
17 but they basically could not wait to divest us because we were  
18 seen as "non-core" to their activities. I certainly do not think  
19 they would stock another 12,000 product lines and accept the low  
20 gross margins that we achieve.

21 In conclusion, from the point of view of Dechra we  
22 certainly support free and fair competition at all levels, and  
23 pharmacists who want to be involved, and more involved in the  
24 supply of veterinary medicines certainly should be allowed to do  
25 so and Dechra would certainly supply pharmacies on the same  
26 terms as veterinary surgeons. However, clearly delivering to a  
27 significant number of extra pharmacies would increase the cost  
28 base for veterinary wholesalers.

29 **MR GRAHAM** (Royal Pharmaceutical Society): I would like to go  
30 through the Issues Statement that was sent out previously and  
31 make comment individually, and then perhaps at the end just make  
32 specific comments against some of the statements that we have  
33 just heard in the two previous presentations.

34 Taking the first comment under "Regulations":

35 *"Veterinary medicines may only be supplied in the UK if*  
36 *they have an MA, usually held by the manufacturer of the*  
37 *veterinary medicine..."*

38 The Society wish to make a point of the fact that the MA  
39 holder can either manufacture the product themselves, or  
40 alternatively contract this out to a licensed manufacturer.

41 *"Veterinary medicines classified as PML may only be*  
42 *dispensed by a veterinary surgeon, pharmacist or by a*

1                   *registered agricultural merchant or saddler."*

2                   A correction to this in pharmacies PMLs must be sold by  
3 the pharmacist, or a person acting under his supervision. In  
4 registered merchants and saddlers' premises PML sales must be  
5 authorised by an SQP.

6                   Under "Regulatory Issues":

7                   *"1(i) Whether the current MRL requirements restrict*  
8 *competition in, and availability of veterinary medicines,*  
9 *particularly for minor species..."*

10                  The Society does not support this view. Even minor species  
11 could end up in the food chain and so it is extremely important  
12 to retain the current MRL requirements.

13                  *"1(ii) Whether the inclusion of an efficacy test in the*  
14 *marketing authorisation procedure unnecessarily increases*  
15 *the barriers to introducing a veterinary medicine to the*  
16 *market".*

17                  The Society does not support this view. Gt. Britain and  
18 other member states have an enviable licensing system. All  
19 licensed medicines have been shown to be safe and produced to an  
20 acceptable quality efficacy in their use. Pharmacists would not  
21 wish to engage in the sale of medicines that had not been proven  
22 to work.

23                  *"I(iii) Whether the absence of provision for a third party*  
24 *to request reclassification of a veterinary medicine, or*  
25 *for regular review of classification, leads to an over*  
26 *classification of veterinary medicines."*

27                  The Society supports an agreed common, harmonised, POM  
28 list for the EU member states. However, it feels that individual  
29 member states should be at liberty to decide the classification  
30 of all other veterinary medicine products.

31                  The Society supports the idea of a third party being  
32 granted permission to apply for reclassification of veterinary  
33 medical products without the need for substantial amounts of  
34 evidence, provided the product already exists safely in a  
35 similarly less restricted category in one of the other member  
36 states, and its safety in the less restricted category had been  
37 proven.

38                  *"1(iv) Whether the lack of a prescription only*  
39 *subclassification for medicines that could be prescribed*  
40 *by a veterinary surgeon (for animals under his/her care)*  
41 *without prior clinical examination restricts competition."*

42                  The Society supports the view that not all veterinary

1 medicines currently classified as POMs need this level of  
2 restriction. There is a genuine need for a subcategory of POM on  
3 which the Society is currently working. Such a classification  
4 would be similar in criteria to that of the Irish POM E, which  
5 requires the veterinarian or pharmacist to supply the product in  
6 person but without the need for a prior diagnosis.

7 Examples of products would include, amongst others,  
8 prophylactic treatments for flocks and herds. The Society will  
9 be submitting a proposal to the VMD later this year.

10 *"1(v) whether the length of time allowed to regulators to*  
11 *reach a decision on marketing authorisations is a barrier*  
12 *to introducing a new medicine."*

13 It is the Society's view that the registration authorities  
14 considering applications for marketing authorisations must be  
15 given sufficient time to complete all the necessary work  
16 required on a product before granting an MA.

17 However, regulatory authorities must agree a target  
18 completion date, and such schedules should not be exceeded.

19 *"1(vi) Whether the requirement that medicines on the*  
20 *Pharmacy and Merchants List (PMLs) may only be dispensed*  
21 *by veterinary surgeons, pharmacists and Suitably Qualified*  
22 *Persons...."*

23 The Society strongly disagrees with this. All premises are  
24 registerable. The barrier is the availability of SQPs when  
25 informed advice is essential. The only products that should be  
26 sold without advice, professional or informed, are GSLs.

27 *"1(vii) Whether the current arrangements which preclude*  
28 *SQPs from breaking bulk in supplying veterinary medicines*  
29 *places them at a competitive disadvantage to veterinary*  
30 *surgeons"*.

31 In accordance with the Medicines Act medicines removed  
32 from the container in which they are licensed become unlicensed  
33 products. The company applying for a product licence must first  
34 prove, as part of an approval process, that the product is  
35 stable and that it is adequately labelled and accompanied by an  
36 information leaflet. Breaking bulk is a potentially dangerous  
37 procedure, and can only be safely undertaken by a professional  
38 who possess sufficient knowledge and understanding of the  
39 pharmaceuticals of the product or products, i.e. the pharmacist  
40 and the veterinary.

41 *"1(ix) Whether the potential for competition from extra EU*  
42 *markets is prevented by the lack of mutual arrangements*

1                    *between the EU and other regulatory regimes."*

2                    Notwithstanding earlier references to the Irish POM E and  
3                    the Society proposal for something similar in general terms the  
4                    current regulatory controls are effective and safe. However, if  
5                    there is a political will to develop mutual arrangements with  
6                    the countries outside the EU in the future this could be  
7                    possible in carefully controlled cases.

8                    **THE CHAIRMAN:** Mr Graham, I do not want to interrupt you in this,  
9                    except to say that I do not think it is really necessary at this  
10                    hearing to go through it on a point by point basis. I think it  
11                    would be extremely useful and helpful to the Commission to  
12                    receive these points in writing, but for the purposes of the  
13                    debate it makes for rather dull listening, if I may say so.

14                    What I really would like you to do is to address the  
15                    issues that have been raised by some of the speakers, and in  
16                    particular what I want to know is do you feel that the  
17                    pharmacists could practically, safely, and efficiently take over  
18                    some of the dispensing role of veterinary medicines? Do you see  
19                    any issues and problems, and would you like to respond to some  
20                    of the points that have been made both by Dechra and by the vets  
21                    as to why this is not a possibility?

22                    **MR GRAHAM:** To put it succinctly, pharmacists are highly trained  
23                    healthcare professionals. As part of the Code of Ethics they  
24                    must not undertake any activities for which they do not feel  
25                    competent. If pharmacists were to undertake a wider range of  
26                    activities such as dispensing veterinary medicines they would be  
27                    professionally, ethically obliged to make sure they were  
28                    competent through training and continued education and  
29                    experience to undertake those roles. In that sense,  
30                    professionally speaking, there is no reason at all why a  
31                    pharmacist suitably trained and competent to do so could not  
32                    undertake any of the supply and dispensing function of  
33                    veterinary medicines.

34                    **THE CHAIRMAN:** Do you think that would make a contribution to  
35                    reducing the cost of these medicines?

36                    **MR GRAHAM:** From a professional perspective it is difficult to  
37                    actually make comment on commercial issues other than to say  
38                    that it is probably in the public interest to have as wide a  
39                    range of access as possible to all services and routes of  
40                    supply. These can vary in the public interest and there may be  
41                    additional benefits relating to supply costs.

42                    **THE CHAIRMAN:** So you are saying that there may be some pharmacists

1 who would like to compete with the vets in the provision of  
2 these medicines, and you think that they would competent to do  
3 so?

4 **MR GRAHAM:** I would say once some of the other issues had been  
5 addressed, such as the supply issues, then pharmacists I think  
6 would welcome the opportunity, if they wished to do so, to offer  
7 this as an additional service to their core activities.

8 **THE CHAIRMAN:** Having cut you short on your point by point critique  
9 of the Issue Letter, I apologise for that except for the  
10 context, and we would be very grateful to receive those  
11 comments, but to have them in writing, if we may.

12 **MR GRAHAM:** Certainly. Can I just make one other comment? A previous  
13 speaker mentioned generic substitution in human medicines. This  
14 is not permissible in human medicines. I would not like the  
15 impression to be given that pharmacists routinely generically  
16 substitute medicines on presentation of prescription. Thank you.

17 **THE CHAIRMAN:** Thank you very much indeed. Before I throw the  
18 discussion open to the floor there are a number of issues that  
19 have been raised there that I am sure people would like to  
20 comment on. What I would like to have - as I am trying to do  
21 throughout this hearing - is to get a sense of how some of these  
22 issues actually impact upon members of the general public, pet  
23 owners, and farmers alike. So I am going to ask my colleague, Mr  
24 Hadley, to comment on some of the e-mails that we have received  
25 from members of the public on whom this has impacted.

26 **E-mails received**

27 **MR HADLEY:** These are messages from animal owners who are in one  
28 way or another expressing frustration at steps which they allege  
29 their vet has taken to restrict availability of medicines and  
30 make it more difficult for them to go to other outlets. I will  
31 just read a few of the representations we have had.

32 A letter from a dog owner in Cheshire:

33 *"My dog needs to take four Rimadil tablets a day at a cost*  
34 *of £23 for 30. I discovered that these tablets can be*  
35 *obtained by mail order at half the price. When I asked my*  
36 *vet for a prescription I was told it was not their*  
37 *veterinary group's policy to do that and I could purchase*  
38 *medicines only through them."*

39 An e-mail from a horse owner:

40 *"We have a horse that will have to be on analgesics for*  
41

1 the rest of his life. We have established that a pharmacy  
2 we use for non-prescription items can supply the drug in  
3 question at a considerably lower price but we will need a  
4 prescription. Our vet had never heard of prescriptions but  
5 after discussing the request with colleagues he advised  
6 the following:

7 \* that a fee of £10 will be charged for the  
8 prescription;

9 \* that the horse will have to be re-examined before a  
10 prescription can be provided and after that the horse  
11 will have to be examined every three months."

12 Then we have an e-mail from a cat owner.

13 "My cat will be on a prescription-only medicine for the  
14 rest of his life. I have found a cheaper source of supply  
15 but my vet was reluctant to write a prescription although  
16 he eventually did."

17 This vet goes on to offer an explanation:

18 "He told me that if more people do this, i.e. if more  
19 prescriptions were written, consultation costs will rise  
20 and consumers will pay more in the long run. He said that  
21 vets need the revenue from medicine sales to subsidise the  
22 practice costs."

23 The writer to us says:

24 "I disagree."

25 It will be quite interesting to get any reactions to that line  
26 of explanation from the floor, I think.

27 Lastly, we have an e-mail from a dog owner in  
28 Leicestershire:

29 "I asked my vet for a prescription for Soloxene tablets so  
30 that I could obtain them from a cheaper source. He said it  
31 was not his policy to give prescriptions. When I insisted  
32 he charged £9.40 for a non-repeatable prescription and  
33 also stipulated that if the animal was to remain under  
34 active veterinary treatment by the practice it must be  
35 presented for examination every three months."

36 So those are the kind of representations we have received.  
37 We have had a pretty large number of that kind. So this is  
38 perhaps a picture of how some animal owners at any rate perceive  
39 the restriction in outlet for POMs at the moment.

40 **THE CHAIRMAN:** Would anybody from the floor like to comment on those  
41 points?

42 **General Discussion**

1 **MR TROWER** (Sheep Veterinary Society): I take some encouragement  
2 from the fact that we have not yet had an e-mail read out from a  
3 complaining farmer. There are 40 million sheep in the UK but I  
4 believe we are classified as a minor species which goes into the  
5 human food chain.

6 Both of the two previous speakers from the NPA and the RPS  
7 have referred to the re-classification of POMs to be PMLs or  
8 P's. A previous speaker to my left here, from the floor,  
9 referred to the possible reclassification of routine  
10 prophylactic medicines such as vaccines.

11 I just had time to sit down and work out there are  
12 somewhere around about eight sheep vaccines on the market at the  
13 moment only three of which are classified as POMs. The other  
14 five are PMLs, they can be purchased from pharmacies or from  
15 agricultural merchants, and those include the two commonest  
16 which are clostridial and pasteurella vaccines which are  
17 routinely used by 85 per cent. of all the farmers in this  
18 country, so they are not classified as POMs.

19 The three that are classified as POMs are all modified  
20 live vaccines. They all contain zoonotic infectious organisms.  
21 They are two that cause abortions - abortions in sheep and  
22 abortions in humans - and the one to which the speaker on my  
23 left referred is Orf. Orf causes a skin disease and in the last  
24 foot and mouth outbreak it became very evident that lots of  
25 farmers were unable to distinguish between Orf and foot and  
26 mouth.

27 I think there is every justification - someone up there in  
28 the regulatory system has looked at these three live vaccines  
29 that can cause disease in humans as well as in animals and has  
30 decided that they should be regulated as a prescription only  
31 medicine. I would concur with that and I think the suggestion  
32 that they should not exposes a certain lack of understanding,  
33 shall we say, on the people who are suggesting that.

34 **MR JOBSON** (Jobsons Farm Health): As has been explained by my  
35 veterinary colleague, sheep is a minority species - that is  
36 surprising to me from Cumbria but after last year it perhaps is  
37 a minor species.

38 Certainly, the statistics regarding the number of products  
39 on the market is accurate of course. I would like to point out  
40 that pharmacists do have an understanding of human health and in  
41 particular they have an understanding of Zoonosis, and Zoonoses  
42 are an area of undergraduate education with all pharmacists.

1 They do understand the significance of Zoonoses and particularly  
2 in sheep areas it is very common for pharmacies to be consulted  
3 in instances of Orf and ringworm and so on and Zoonotic diseases  
4 that come from livestock animals. So it is an area that is  
5 understood.

6 I did make it very clear in my initial comments that the  
7 suggestion was that these products would be supplied in  
8 circumstances where they had been used routinely for a  
9 considerable length of time. I am grateful to my veterinary  
10 colleague for pointing out the importance of the aspects of  
11 careful administration so that the Orf virus is not introduced  
12 into flocks that hitherto had not been infected, and also the  
13 safety aspects of administration to avoid contamination.

14 **THE CHAIRMAN:** Thank you, Mr Jobson. I do not think the previous  
15 speaker was suggesting that pharmacists should not be allowed to  
16 dispense these medicines. I think what he was saying was that  
17 those particular medicines should not be declassified down from  
18 their current classification of POMs, and I might say that we  
19 would not, and I do not think anybody in the room would favour  
20 the declassification of medicines in that sense that have been  
21 properly classified in that way.

22 We have received complaints, however, that there are a  
23 number of other medicines - perhaps those affecting pet owners  
24 rather more than farmers - that are inappropriately classified,  
25 but I do not think the previous speaker was suggesting for one  
26 minute that pharmacists were not capable of recognising Zoonosis  
27 issues and dispensing such appropriately prescribed medicines.

28 Are there any other speakers who want to comment on this?

29 **MR SALISBURY** (Royal Association of British Dairy Farmers): I am a  
30 practising dairy farmer. Obviously we have to separate ourselves  
31 from the pet owners. Dairy farmers are professional operators  
32 nowadays. We have a wonderful working relationship with our  
33 veterinary surgeon.

34 The problem that we have is that the cost of medicines -  
35 this has already been alluded to - is not even over the EU.  
36 Please can we have some level playing field. The EU is there to  
37 support our industry. It is there to control and license  
38 medicines to be used. We have so many organisations who seem to  
39 want to make empires. What the farmer needs is to be competitive  
40 with his product at the end of the production line.

41 It has been mentioned that we are not allowed to pass on  
42 the costs due to the situation of food processing, but we do not

1 really have control of the final cost. We need to get the EU,  
2 along with the help of this Commission, to get an level playing  
3 field with respect to licences throughout the EU and preferably  
4 throughout the world. Animal husbandry is not that very  
5 different throughout the world.

6 **THE CHAIRMAN:** I would like to make the point that our jurisdiction  
7 is UK. Nevertheless, if we feel that European regulation is  
8 having an adverse impact on British consumers we are at liberty  
9 to make that quite clear, as we have done in the past in, for  
10 example, the car inquiry and our comments in those respects have  
11 been taken on board by the Commission. If we feel that this  
12 situation is adversely impacting on the competitiveness of the  
13 supply of veterinary medicines in the UK we can make appropriate  
14 recommendations.

15 As I said earlier on, we have a live webcast at the  
16 moment, and we would just like to take one particular comment  
17 from somebody who has just participated in the debate through  
18 the webcast.

19 **MR SMITH:** This is an e-mail we received two minutes ago which has  
20 come from a Mr Jonathan Head. It is very short and it responds  
21 to something he has just heard. He says:

22 *"I hear the view that there may be an impact on prices*  
23 *adversely if Suitably Qualified Persons [SQPs] cannot*  
24 *break bulk packs. However, veterinary surgeons can only*  
25 *supply their own clients. Others may be able to supply*  
26 *anyone, and therefore have economies of scale not*  
27 *available to vets. Furthermore, pharmacies have an NHS*  
28 *subsidy, again not available to the veterinary*  
29 *practitioner".*

30 It is a comment rather than a question.

31 **THE CHAIRMAN:** Thank you.

32 **MR WARE:** (President Elect, RCVS. Immediate past President  
33 Preliminary Investigation Committee): I would just like to  
34 respond to a couple of points from the e-mails read out at the  
35 start of this open part of the session.

36 I am disturbed, but not entirely surprised at the alleged  
37 ignorance of some of my colleagues and their alleged attempts to  
38 inhibit competition. I say "not surprised" because I am sure  
39 exactly the same antics will go on in any other profession and  
40 in probably any other occupation. But it is the function, as we  
41 have already heard, of the Royal College, to investigate  
42 complaints and if those complaints are laid formally in front of

1 us then we will most certainly investigate them as we would any  
2 other complaint.

3 It is worth noting that in the last full year for which we  
4 have figures, which was only the last calendar year, there were  
5 720 complaints to the Professional Conduct Department about the  
6 activities of veterinary surgeons. 60 (in round figures) of  
7 those involved fees in all its guises, and only one that I am  
8 aware of - and that was not even in the last full year, that is  
9 one we are investigating at the moment - involves the issue of  
10 the supply of prescriptions.

11 So the complaints' procedure exists, it is accessible, but  
12 the number of complaints which we receive from the public are  
13 very, very small in any form, but certainly considerably smaller  
14 in the relationship with fees.

15 Again from the regulatory point of view the College would  
16 entirely support those veterinary surgeons who wished to make  
17 re-examinations of animals who are suffering from chronic  
18 illnesses and on long term medication. Both the illnesses  
19 themselves evolve and the medication which they may be on may  
20 have internal implications for the health and welfare of those  
21 animals and we would be extremely critical if veterinary  
22 surgeons did not make regular examinations of animals under  
23 their care - just as we would be equally critical of any medical  
24 doctor who did not make regular examinations of patients under  
25 his care.

26 The timescale is not prescribed, it is open to judgment  
27 according to circumstances, and the important issue from the  
28 College point of view is that the veterinary surgeon should not  
29 institute procedures as a debarment to the provision of  
30 prescriptions which were not there when they were not providing  
31 prescriptions, when they were providing the medication  
32 themselves. So we would certainly take issue if such a procedure  
33 were followed, purely and simply as a disincentive to the supply  
34 of prescriptions and veterinary surgeons in the generality are  
35 well aware of the need to provide prescriptions.

36 **THE CHAIRMAN:** Thank you very much.

37 **A SPEAKER:** I am a general public person - a cat and a dog owner.  
38 Several of my neighbours realised I was coming today and did  
39 want me to stand up and try and speak, so I shall do my best.

40 One of the first things concerned complaints, so it is  
41 quite nice that I have just heard the gentleman speak. When we  
42 do have a complaint we do not actually know where to go. It

1 would be nice in the waiting room if perhaps the Royal College  
2 could have a sign saying "If you do have a complaint" - it may  
3 be next year he does not have 720 but 1,020, but at least that  
4 way we do know where to go.

5 Secondly, regarding the guidelines on prescription fees  
6 and things like that. I personally would love to go to a  
7 pharmacy and collect whatever I needed. Yes, I appreciate that  
8 vets are not earning as much as they would like to and that is  
9 why they want to charge us £10, £15 that I have been charged for  
10 re-doing prescription charges. I know that Mr Green said that  
11 everything has to be reasonably charged. I would like to define  
12 "reasonable", and perhaps again have something shown in the  
13 waiting room to say how much you are going to charge us. Whether  
14 this can be a range from £2 to £10, at least it would be  
15 advising us. Whenever I go the charge rate does seem to change  
16 from month to month. I understand that inflation does occur, but  
17 not from, say, £5 to £10 for the same product.

18 **THE CHAIRMAN:** Thank you very much for that contribution. I think it  
19 is worthwhile the room recognising that it is, after all, the  
20 public that we are all serving, and it is extremely useful to  
21 hear the voice direct. Thank you.

22 **MR WILLIAMS:** Just to come back on a few points made earlier. The  
23 point that education and training is essential - clearly it is.

24 Pharmacists who have undergone continuing education  
25 particularly in veterinary areas are, as was stated, small but  
26 then you would expect that if they are not given the opportunity  
27 to get at the materials to apply that training in a practical  
28 way.

29 The second point concerns the remarks made by the  
30 representative from Dechra who mentioned that human wholesalers  
31 always had the opportunity to supply and to buy in veterinary  
32 medicines. I think we have to accept that it is the same reason  
33 why it remains that human pharmaceutical wholesalers do not  
34 stock veterinary medicines. Why would they when the pharmacist  
35 cannot do anything with them in the first place because of the  
36 lack of prescriptions?

37 **MR A EVANS** (Director, veterinary pharmacy): I am a director of a  
38 veterinary pharmacy that mainly deals mail order. We are also  
39 wholesale to other pharmacies as well, one of the niche  
40 wholesalers that Trefor was talking about.

41 I would like to make a few points. A year ago we  
42 dispensed probably one veterinary prescription a day, if that. I

1 have never come across anybody who has been offered a  
2 prescription by a vet in the five years that I have been  
3 involved in the business. It is only through, "aggressive" is  
4 probably the wrong word, but an aggressive press campaign by  
5 ourselves, that we have actually started to receive  
6 prescriptions from the general public.

7 We have found, and I would not wish to tar the whole  
8 profession with the same brush, but certainly a large number of  
9 vets, who have been charging and going through the type of  
10 practice we have heard via the e-mails, whether it be charging  
11 an excessive amount, the record so far is £70 for one  
12 prescription which basically made up the difference that we  
13 could save the lady on some epilepsy drugs for her dog.

14 I would also like to comment on the fact that the vet  
15 should see the animal within a certain length of time. That is  
16 obviously quite correct, and we would never tell any of our  
17 customers any different, and the likelihood is a three month  
18 regular consultation to make sure that the symptoms had not  
19 changed, or that the drug had become less effective, or  
20 whatever.

21 However, another ploy that is used unfortunately is that  
22 members of the public are asked to come in on a more regular  
23 basis than they were when the vet was prescribing themselves,  
24 and therefore incurring more consultation fees than they would  
25 have done when the supplier was originally there.

26 There are many, many hurdles. We now do about 170  
27 prescriptions per month, but that is only after a full year of  
28 very extensive advertising.

29 **MR ROACH** (Dechra Pharmaceuticals Ltd): As a wholesaler my concern  
30 is only about the cost effective distribution and the  
31 availability of prescription only medicines on the veterinary  
32 side. I know nothing about the human side, so my comment really  
33 comes as a question. As my colleague said what concerns us is  
34 the mix of products as well, because when you are working on a 4  
35 per cent. gross margin it is the mix of products that is  
36 important, actually to a certain extent other products can  
37 subsidise prescription only medicines. So on the human pharmacy  
38 side I suppose my question is is there a regulatory professional  
39 or ethical requirement that pharmacies stock, or make available  
40 a full range of products on presentation of a prescription, so  
41 they cannot just choose to supply let us call it the most  
42 popular products, and would they envisage that this approach

1 would continue in the future for their business if veterinary  
2 products were included in their business?

3 **MR WILLIAMS:** We can certainly give you some information if that  
4 helps.

5 **THE CHAIRMAN:** Just very briefly if you could answer that point, but  
6 then possibly it is something that can be done in writing in  
7 more detail.

8 **MR WILLIAMS:** Because of the NHS nature of most pharmacies, within  
9 the NHS all pharmacies are required to supply what is prescribed  
10 with reasonable promptness, therefore the wholesalers are  
11 obliged to stock widely, just the way vet wholesalers will.  
12 There are also short line wholesalers in the pharmacy area who  
13 do cherry pick. One would imagine that might start to occur  
14 within the vet world as well. But I do not think the vet  
15 wholesalers ought to be worried about 13,000 pharmacies coming  
16 on board as potential customers. I have presented you some data  
17 suggesting what just 10 per cent. of them might do to change  
18 things.

19 **THE CHAIRMAN:** Thank you. I think we should now move on to topic 3,  
20 and I am going to call upon Mr Andrew Scott, the President of  
21 the BVA to address us on this point.

### 22 **Topic 3**

#### 23 **Veterinary surgeons' charges for prescription only medicines**

24 **MR SCOTT** (British Veterinary Association): In the paper work that  
25 we have received from the Competition Commission the BVA was  
26 asked to speak on veterinary surgeons' charges for prescription  
27 only medicines.

28 The BVA is the representative body for the whole  
29 profession and that includes academics, regulators, industrial  
30 vets as well as practitioners. We have, as the Competition  
31 Commission already knows, been involved in the development and  
32 implementation of veterinary medicines' policy for many years.

33 In the next few minutes we are asked to contribute to this  
34 morning's programme, and to restrict ourselves to charges for  
35 POM medicines. Reading section 4 of the Competition Commission's  
36 paper setting out 14 Jeremy Paxman-type statements we could be  
37 forgiven for thinking we should all be locked up and the key  
38 thrown away.

39 **THE CHAIRMAN:** I think they were put hypothetically and raised as  
40 issues for discussion rather than Paxman-style accusations----

41 **MR SCOTT:** It is nice to have a response! [**Laughter**] May I just  
42

1 quote three of these fourteen statements:

2 *"IV(iv) Whether veterinary surgeons refuse to write*  
3 *prescriptions, or by some action or omission, discourage*  
4 *requests from animal owners for prescriptions.*

5 *"IV(v) Whether veterinary surgeons by some action or*  
6 *omission may have indicated to veterinary manufacturers*  
7 *and/or veterinary wholesalers that they should refuse to*  
8 *supply pharmacists, or supply them on less favourable*  
9 *terms.*

10 *"IV(xi) Whether veterinary surgeons charge higher than*  
11 *necessary prices on prescription only medicines."*

12 Of course the Competition Commission do not really mean to  
13 sound hawkish, and of course we do not behave in such a fashion.  
14 It is just that having started on this exercise the whole issue  
15 has been put under the microscope.

16 I would like to make three substantive points and I start  
17 with a twofold objective. We are veterinary surgeons providing a  
18 service in the private sector and we are business men earning a  
19 livelihood and doing both in a cost-effective way to survive in  
20 this market place.

21 We should be able to achieve both without creating a  
22 monopoly of whatever kind and without being greedy in spite of  
23 our privileged position as professionals.

24 Let us work backwards, not least because the practitioner  
25 is at the end of a long chain, the medicines' chain. The client  
26 has his animal treated, and is presented with a bill. The  
27 components of that bill are the same anywhere. They are labour,  
28 equipment, materials, overheads and profit.

29 A practice in Cumbria does not attract the same overheads  
30 as one in Mayfair. A Portakabin is not as expensive as a brand  
31 new, state of the art veterinary hospital. But the components of  
32 cost are the same.

33 The ratio of these cost components are not the same for  
34 different treatments for different animals. So all the numbers  
35 vary and the extent to which each component is listed and sub-  
36 divided can be short, or very long indeed and an itemised bill  
37 can read just like the checkout at Tesco's.

38 Within these four categories we are talking about  
39 materials. Within that veterinary medicines, within that POMs,  
40 and within that POMs for different treatments. Incidentally it  
41 should be remembered sometimes with a zero POM cost since they  
42 might not be required.

1 Small volumes of POM will not be as expensive as large  
2 volumes. Companion animal treatment does not require the bulk  
3 purchase of a POM whereas farm animals can be very different.

4 By the time you have put all these variables together a  
5 picture emerges of a cost component being only part of a bill.  
6 Indeed, salaries, wages and overheads can both well exceed the  
7 percentage cost of POMs purchased. My first point is perspective  
8 and we should not lose sight of it.

9 My second point is profit and size - our operating  
10 surplus. For the last fourteen years the BVA has carried out  
11 inter-practice comparisons on veterinary surgeries involving  
12 round about 1200 veterinary surgeons. We work out income per  
13 vet, net profit per partner, percentage return on investment and  
14 so on. In real terms these indicate a show over the last few  
15 years, no growth at all. In fact, in many cases we have not kept  
16 pace with inflation.

17 There are integral parts of practice that will not provide  
18 a return. Greed is not self-evident to us, it is evidently  
19 absent but if there is it should be dealt with as we have heard  
20 from the Royal College. When the last investigation of  
21 veterinary prices and fees took place, 18 months ago, we  
22 commissioned a survey to try and show the distribution of POM  
23 costs and fees for a range of medicines. The distribution curve,  
24 of course, was normal, as seen by our independent analyst.  
25 Incidentally, the same analyst that did the work for the  
26 Competition Commission. There was no significant evidence of  
27 excess pricing. The figures were all published in the veterinary  
28 record at the time.

29 My third and final point is understanding the cumulative  
30 cost of the medicine chain. By the time that you have gone from  
31 the research budget of a manufacturer, the development of a  
32 measurable unit of product, through its development, through its  
33 regulation, through its distribution and eventually removed it  
34 from the pharmacy shelf to dispense to a client, one unit of  
35 product has gone from cost to cost plus, to cost plus plus. No  
36 business can survive on the basis of cost minus - well not for  
37 long anyway.

38 If there is a scope to increase competition dismantling  
39 the veterinary medicine chain may be required. Probably there is  
40 greater scope for price reduction further back up the chain than  
41 at the point of sale to the client.

42 So before I hand over to my colleague, David Miller, allow

1 me to be Jeremy Paxman. We shall take the role of the  
2 Competition Commission as monopolistic, nothing else matters.  
3 All you have to do is to eliminate all veterinary medicines  
4 legislation, go on general sales for everything. Do not bother  
5 with veterinary diagnosis. Forget all aspects of food safety and  
6 residues, and side effects, buy generics, which is Government  
7 policy for the NHS, and then wait for the supply of molecules  
8 for disease control to be run down.

9 David Miller, I hope, will put these policy issues in a  
10 slightly more constructive light.

11 **THE CHAIRMAN:** I feel I would like to emphasise to everyone that the  
12 Competition Commission is concerned with the public interest and  
13 we would make those recommendations, that may well follow those  
14 that have been suggested to us, but we would make those  
15 recommendations that we think will be most beneficial to the  
16 public interest.

17 **MR MILLER:** In respect of issues identified in the area of  
18 regulation may I, on behalf of BVA, make four points:  
19 1. Efficacy. When the UK Medicines Act, 1968 was enacted as a  
20 component of consumer protection legislation introduced by the  
21 then Labour Government the three regulatory pillars of safety,  
22 quality and the efficacy were introduced into UK law.

23 Earlier than 1968 I remember, when I first joined the  
24 veterinary pharmaceutical industry, there was a scheme in  
25 operation called the Veterinary Products Safety Precautions  
26 Scheme. This was a voluntary scheme under which veterinary  
27 medicine manufacturers were required to produce evidence only of  
28 safety issues. There was no requirement under that scheme to  
29 have anything about efficacy or quality - safety only.

30 When the legislation came on we had the three pillars -  
31 safety, quality and efficacy - and they have subsequently become  
32 the norm worldwide and are presently fundamental to European  
33 Union, Japanese, and US legislation in this area on veterinary  
34 medicines.

35 These three bodies - the EU, the US and Japan - are of  
36 course the key members of the VICH initiative which is currently  
37 to establish some common standards in areas of regulatory  
38 information required from manufacturers.

39 Let me emphasise that data from manufacturers on efficacy  
40 are today considered essential to protect the consumer from  
41 spurious or misleading information, and it seems that a retro  
42 approach, going back to 1964 might not be the way forward.

1 EU influence: as a member of the EU the majority of UK  
2 veterinary medicines legislation law reflects EU directives and  
3 regulations developed and agreed in Brussels. The Veterinary  
4 Medicines Directive, as was said earlier, were in November,  
5 2001, consolidated into one document, but currently a two to  
6 three year process is ongoing to modify that consolidated  
7 directive with a professed aim of increasing the number of  
8 approved therapeutic products for animals in the EU.

9 This brings me to the point on distribution thinking with  
10 in the EU. There is no EU agreement on distribution policy for  
11 veterinary medicines, however, an important proposal from the  
12 Commission is currently on the table, and it would require in  
13 the name of traceability and enhanced food safety, that all  
14 veterinary medicines for food animals should be available only  
15 under veterinary prescription.

16 To suggest distribution systems that may not enhance  
17 consumer protection appears therefore to be swimming against the  
18 tide, the tide of current community thinking on consumer  
19 protection and safe food.

20 Lastly, may I comment briefly on global influences. We  
21 live in an age of globalisation - animal health is no different.  
22 The rules on animal health adopted by the World Trade  
23 Organisation [WTO] have been compiled by the OIE - sometimes  
24 known in English as the World Animal Health Organisation. This  
25 represents member governments. The UK member is a fully paid up  
26 member of both WTO and OIE.

27 The OIE in December last year produced a draft document on  
28 the responsible and prudent use of antimicrobial agents,  
29 antibiotics in veterinary medicine. This document is expected to  
30 be ratified by the OIE next month, May, 2002, and it calls for  
31 member governments of the OIE to ensure that all food animal  
32 veterinary antibiotics are available only on veterinary  
33 prescription and furthermore supplied only to animals under the  
34 care, the terminology used in the document is very similar to  
35 that adopted by the RCVS here in the UK. It also says that not  
36 only food animal antibiotics should be on veterinary  
37 prescription only, supplied to animals under the care of the  
38 veterinarian, but also importantly after appropriate diagnostic  
39 procedures have been carried out.

40 **THE CHAIRMAN:** Mr Miller, I have indulged you---

41 **MR MILLER:** I have one second more if I may.

42 **THE CHAIRMAN:** Well, you may have one more second more but it would

1 be helpful if it was actually on the topic under discussion and  
2 that is veterinary surgeons' charges for prescription only  
3 medicines. That is the point. We have already had one speaker  
4 from the vets, there are others who want to speak. Let us hear  
5 it on charges.

6 **MR MILLER:** Very well. If I may just finish this comment I have---  
7 **THE CHAIRMAN:** You promise to speak on charges?

8 **MR MILLER:** My general comment, and it is a sentence, says: the room  
9 for national manoeuvres and initiatives, particularly in the  
10 area of food animal veterinary medicines is substantially  
11 constrained by international obligations.

12 **THE CHAIRMAN:** Nothing on charges. Perhaps the speaker from the  
13 National Farmers Union will be able to enlighten us on what he  
14 thinks about veterinary surgeons' charges for prescription only  
15 medicines.

16 **MR CUTLER:** (Chairman, Animal Health and Welfare Committee, NFU):  
17 Our concerns with veterinary medicines are in three areas, and I  
18 will very briefly say what the other two are, the third one  
19 being charges. I am getting quite nervous. [**laughter**]

20 The first concern has to be safe and responsible use and  
21 food safety. We have been involved in Responsible Use in  
22 Medicines in Agriculture Alliance (RUMA), and a major part in  
23 it, which is a food chain initiative looking at responsible use.

24 Our second concern is availability from the animal health  
25 and welfare point of view, we need to have the medicines  
26 available, and therefore we welcome things like the extension of  
27 the extrapolation of MRLs for minor species.

28 Our third concern obviously has to be costs. I brought up  
29 the point earlier that in the agricultural industry it is very  
30 difficult for us to pass on costs and given the state of the  
31 industry at the moment the NFU has been very active at looking  
32 at input costs generally.

33 Our members have, for several years now, commented on drug  
34 prices simply because Irish prices are perceived to be lower,  
35 people travel to New Zealand and see different prices. We are  
36 competing on the world market and it is very important that  
37 input costs there are as similar as possible. When we have tried  
38 to look at this issue over the years the lack of transparency  
39 through the system has been very apparent. It is interesting how  
40 it has become a lot more transparent since the Competition  
41 Commission have been investigating - I seem to be able to get  
42

1 more information from people than I used to be able to.

2 The Marsh review so far as we were concerned dealt with a  
3 lot of the concerns. We feel quite strongly that the  
4 encouragement for the use of prescription, the separation of  
5 prescribing and dispensing, even within veterinary practices, as  
6 long as there is a fixed charge on the prescription side, or a  
7 limit on the cost of the prescription, would encourage  
8 competition within the system.

9 The argument often put to us from the veterinary  
10 profession has been that it is necessary to cross-subsidise fees  
11 with the margin made on medicines. We believe that the time has  
12 come for the veterinary profession to take the opportunity,  
13 given the circumstances, especially within agriculture at the  
14 moment, to levy proper fees, and learn to sell their services  
15 differently, rather than providing an emergency call-out service  
16 and all availability - to start looking at service contracts  
17 with farmers, to start looking at herd health plans. The Curry  
18 Commission has pushed very firmly in the direction of farmers  
19 needing to be registered with vets, needing to develop herd  
20 health plans, and the use of a proper selling of services  
21 approach within the veterinary profession I think is the way  
22 forward. We can develop a far better approach to animal health.

23 That opportunity will be quite difficult to grasp because  
24 it requires a culture change within the veterinary profession,  
25 but it also requires a major culture change within the farming  
26 profession, and we hope to be able to work with the veterinary  
27 profession to be able to develop that approach. To put things on  
28 a fairly simple basis we feel that cross-subsidy of fees with a  
29 large margin on the medicine prices is untenable in the long  
30 run, that encouragement of the use of prescriptions would  
31 improve the situation, improve competitiveness within the  
32 system.

33 **THE CHAIRMAN:** So what you are saying is that, in a sense, to use  
34 some of the analysis that we would use in the Competition  
35 Commission, that there are in fact two markets - a market for  
36 veterinary services, that is to seeing animals, diagnosing them,  
37 indicating what is wrong with them, and prescribing, and there  
38 may be a second market place which is for the dispensing of the  
39 medicines and both vets and pharmacists could do that?

40 **MR CUTLER:** That is the analysis we have of it, and unfortunately  
41 the service side of it has not been developed well enough and  
42 this tends to be subsidised.

1 **THE CHAIRMAN:** We have heard from a lot of vets to say that they are  
2 not interested in the business side often, they are there to  
3 look after animals and perhaps they do not want to spend as much  
4 time as some of the other professions have had to in recent  
5 times, in learning to become businessmen.

6 **MR CUTLER:** I think there would be a lot of farmers who would say  
7 their interest is to produce food and not be businessmen, but in  
8 fact that is an untenable position we recognise, and I think the  
9 same is true in the veterinary profession.

10 **THE CHAIRMAN:** Thank you very much.

11 **MR STEWART** (National Farmers Union of Scotland): You may be  
12 dreading an identical presentation but I think you will see that  
13 there is a fundamental point of difference between the NFU and  
14 the NFUS. We are widely held to have been responsible for  
15 starting this whole procedure, and I make no apologies for that.

16 Obviously, coming as a farmer we deal almost exclusively  
17 with large animal practices, though if you have seen the size of  
18 Shetland sheep and some of the Ronaldsay Ewes I am sure that  
19 vets in inner city housing estates may be dealing with far  
20 larger alsatians.

21 This whole procedure is not an attack on vets' practices.  
22 We accept that the mark up is a vital part of their margins. In  
23 Scotland obviously we have a large percentage of remote areas  
24 and it is an absolutely vital service that the vet provides. We  
25 have often no access to pharmacies. We need the product  
26 immediately. We are not convinced that opening this up to  
27 pharmacies would lead to lower costs.

28 I have discussed this fully with my vet. It would be  
29 stupid to go into this argument unless I know the vet's position  
30 and had discussed it with him. I get an itemised, fully  
31 transparent bill from him as a matter of course. I have asked  
32 him, and he has told me his mark up and I have to say that his  
33 margin is reasonable. I have no complaints on that at all.  
34 Bearing in mind that he used to stock it, hold it, and  
35 eventually in some cases throw away stuff that was past its sell  
36 by date.

37 He buys through a buying group. That maximises the  
38 efficiency in transport, storage and all the rest of it, so he  
39 gets the benefits of bulk buying.

40 If we extend this principle of fully itemised bills it may  
41 actually make the problem worse in that it will highlight higher  
42 prices. You just go on to the internet and get prices instantly.

1 I was doing it last night just to see what the prices are around  
2 the world. These prices are open to everybody. They will find  
3 out the prices.

4 There is, in Scotland, a large black market. There is no  
5 point in running away from that. I believe that this is a  
6 serious threat to animal welfare, and it is obviously a serious  
7 threat to human health. That is obviously something that will  
8 exist where you can get products up to 70 per cent. cheaper. We  
9 are not talking about 10 per cent. here. Nobody is going to  
10 bother about 10 maybe even 15 per cent. It is when you start  
11 getting products about 70 per cent. cheaper there is a clear  
12 temptation.

13 You will perhaps hear later carefully chosen examples to  
14 deny the extent of the problem. It is possible to pick up prices  
15 in other countries that are fairly similar to ours, but be aware  
16 that there is a huge disparity

17 I think we have already heard at a previous conference  
18 that the mark up by the manufacturers is what the market will  
19 bear. They are quite right, if they can get away with it, to do  
20 that.

21 Yes, we need new products, and these new products must be  
22 paid for, but I would point out that Australia, America, Spain  
23 and Ireland - the countries where we can draw these products -  
24 they are a very cheap price. They are no different from us. They  
25 mostly have an exporting status, they are sensitive to all the  
26 concerns that we are sensitive to, and they will not take risks.

27 I think, madam Chairman, I hesitate to advise you, but I  
28 think we need a determined effort to figure out accurately the  
29 extra costs of our regulatory system. That has to be capable of  
30 being pinned down. If you think it is 40 per cent. it is adding  
31 to the costs, I for one do not think so. I think that we have to  
32 be careful that you, as a Competition Commission, are not side  
33 tracked by the share of the market that any wholesalers have. If  
34 you are not competitive as a wholesaler then you do not get the  
35 business.

36 To go back to a point that I made at the NOAH conference,  
37 there is a huge potential for vets and farmers to draw up a  
38 health plan. I was on this kick long before Don Curry started on  
39 it. If you look at the genetic potential that there is in the  
40 modern animal the best way to get that is for the vets and the  
41 farmer to sit down, knowing what that herd, and the management  
42 system and past problems are like, sit down and draw up a proper

1 health plan. I think it will result in less fire brigade  
2 treatment, and it will lead to a proper use of modern products.  
3 That, in short, requires confidence on the part of both the vets  
4 and the farmers that they are not being ripped off by the  
5 manufacturers; that they are getting a product at the same price  
6 as their competitors. It comes down to that.

7 **THE CHAIRMAN:** One point I would like to raise, and we will be  
8 discussing it a little further in the next topic, this business  
9 about prices, we have heard that vets do not know what they are  
10 paying for some of the drugs because of the system of  
11 retrospective rebates and so on, and when they are actually  
12 charging their farmer customers and the pet owner customers,  
13 they are charging their mark up based on the list price, and  
14 that that can sometimes lead to an excessive or, if you like,  
15 double profits.

16 **MR STEWART:** This would mirror exactly what happens in the crop  
17 chemicals market where, for example, product packs are marked  
18 with invisible markers so if you happen to get a cheaper offer  
19 elsewhere and your supplier sees the carton lying he can take it  
20 away and analyse it to find out what supplier stepped out of  
21 line, has traded outwith his area. If I thought for a second---

22 **THE CHAIRMAN:** Sounds like another investigation! [laughter]

23 **MR STEWART:** Well, there are similar issues here where we can buy  
24 these crop chemicals cheaper abroad. It may well be that this is  
25 something that we recommend. But, back to your stance that if  
26 there is a system of retrospective rebates based on how well  
27 they do and how much of that manufacturer's product they sell  
28 during the year and so on, and how well they hold their price,  
29 then I think that is something that should be looked at and done  
30 away with if possible.

31 **THE CHAIRMAN:** Thank you very much for that. I am going to ask my  
32 colleague, Mr Henderson, to comment and to reflect some of the  
33 e-mails that we have received during the course of this hearing  
34 and prior to it.

35 **E-mails received during the hearing**

36 **MR HENDERSON:** The striking thing is that in this general topic are  
37 we have not had anything from other than pet owners. I think we  
38 have had some very cogent interventions from the farming world,  
39 but they do not seem to have time to get to the e-mail and let  
40 us know individually how they feel about it. I hope that is the  
41 correct interpretation rather than that actually there are no  
42

1 concerns. The e-mails that we get do tend to cover topics that  
2 we have also discussed. There is one specific topic which has  
3 not come up in the discussion so far at any point and this is to  
4 do with competition between vets. One e-mail from a cat owner in  
5 Essex said:

6 *"The most frustrating element is that it is impossible to*  
7 *find a competitive price for annual vaccinations. I have*  
8 *failed to find any price variation between vets in my*  
9 *area. The price is extremely high and extremely*  
10 *consistent."*

11 Another e-mail from a dog owner:

12 *"Our vet seems keen on prescribing expensive drugs when*  
13 *cheaper alternatives are available. As a GP I am*  
14 *encouraged to prescribe the cheapest effective drug, why*  
15 *can't vets do the same?"*

16 I have two others which are to do with repeat  
17 prescriptions which I think we have already had.

18 **THE CHAIRMAN:** It is still useful I think for the floor to hear what  
19 is said.

20 **MR HENDERSON:** Yes, it states:

21 *"My vet stated he will only issue one repeat prescription*  
22 *without seeing the dog again, hence charging another*  
23 *consultation fee".*

24 The tone of that is now well familiar to us.

25 *"The Competition Commission needs to look at the*  
26 *possibility of allowing repeat medication to be sold at*  
27 *other outlets such as pharmacies and pet shops."*

28 So it is a theme which keeps recurring.

29 **THE CHAIRMAN:** A consistent picture. Any comments from the floor?

#### 30 **General Discussion**

31 **A SPEAKER:** Madam Chairman, I am a farmer from the  
32 Wiltshire/Someset border. I am not used to public speaking so  
33 you will have to forgive me if I hesitate a bit. 4 per cent  
34 margin - I will give you one instance which I quoted to you in a  
35 letter many months ago, buying antibiotics for pigs a vet was  
36 charging £108, I found another source, legal source, I stress,  
37 for £42.50. I now get a prescription from my vet and get it from  
38 that source.

39 You are talking about a 4 per cent. margin and greed. I  
40 will leave it up to people here present to decide who is having  
41 what.

42 Every time I mention these prices to the vet I get a

1 little lecture about consultation fees would have to go up. Well  
2 I would sooner have it that way, at least I know what I am  
3 paying for.

4 I see the vet appears only has one wholesaler so I cannot  
5 see how he can get competitive prices from one wholesaler. When  
6 I order fuel I ring round three or four firms and get various  
7 prices it is amazing. So I do not see how the vet gets  
8 competitive prices from one wholesaler.

9 I have never been offered a prescription, well I have only  
10 recently been asking for a prescription but I have never been  
11 offered one. I do take up the point, we keep hearing about these  
12 cheap drugs in Ireland. The vets say "Oh they are not up to  
13 standard", but I would like to know if they are up to standard,  
14 and it is just the vet telling us the tale. Thank you.

15 **THE CHAIRMAN:** Thank you for that. I think Dechra wants to respond.

16 **MR EVANS:** Just to clarify, when I said 4 per cent. margin, that is  
17 the average wholesaler margin. Clearly the manufacturers have a  
18 margin and the veterinary practices themselves have a margin. So  
19 clearly the end price to the customer, the consumer, the farmer,  
20 is a combination of all three. So when I said "4 per cent", I  
21 was purely relating to the wholesaler margin.

22 The second point in terms of wholesalers, there are six  
23 wholesalers who operate, one of them is in Northern Ireland  
24 only, but the other five - all are Dechra's competitors - I  
25 think are in the room, and will all be pleased to offer their  
26 services to your veterinary surgeon. So at wholesaler level all  
27 the five wholesalers that operate in England, Scotland and Wales  
28 will be happy to offer a competitive price.

29 **MR Dean** (Society of Practising Veterinary Surgeons): I am a mixed  
30 practitioner from Cornwall. I would like to jump slightly to  
31 the defence of the veterinary practices who are being accused of  
32 perhaps being poor business people. As I understand it if you  
33 are bad in business your business usually fails. Practising  
34 veterinary surgeons have had many changes over the last 50/60  
35 years. They have changed from the horse to the tractor and the  
36 lorry, losing vast amounts of their work. We are now struggling  
37 with the demise of the farm practice in many areas with  
38 shrinking numbers of farms available for us to treat.

39 We are changing from fire brigade work to advisory work -  
40 we are doing that. Even in the small animal sector now we are  
41 changing much more towards preventive medicine, much as is  
42 happening in the human market.

1 I have to stress that there is competition out there. I am  
2 in an area where there are several veterinary practices. If I  
3 charge £70 for a prescription my clients would go elsewhere, and  
4 if clients are feeling that they are being over charged, then  
5 they must go elsewhere, or at least communicate with their vet  
6 their disgust. Ask for a prescription, shop around for  
7 medicines, there is nothing to stop them doing that already, and  
8 at the end of the day if they are still unhappy go to the Royal  
9 College of Veterinary Surgeons and complain. We are man enough  
10 to cope with this. We are man enough to adapt and change. We are  
11 business people, but we are also in this for animal welfare, and  
12 don't forget that issue also.

13 Thank you.

14 **THE CHAIRMAN:** Just on that point of shopping around, we have had  
15 some complaints from people who suggest that they find it  
16 difficult to move vets because they have to get permission from  
17 the previous vet to move. Would you like to comment on that?

18 **MS PAULL:** I think sometimes it is a little bit misunderstood that  
19 permission is required. If a client comes in to me wishing to  
20 move to our practice, we would contact the previous veterinary  
21 surgeon, not to get permission, they can just walk out, there is  
22 no problem. What we would need to do is to get previous  
23 histories, because for instance, there may be evidence of  
24 disease situations and we do not need to repeat and go over the  
25 same investigative procedures and it is for the welfare of  
26 either the farm itself or for the pet that we get all the  
27 previous history. That is why we would contact the other  
28 veterinary surgeon, and for no other reason.

29 **MR EVANS:** May I clear up this word "generic"?

30 **THE CHAIRMAN:** Please, I am sure that would be very helpful.

31 **MR EVANS:** This word "generic" is used a lot and we hear about  
32 generic products being cheaper. I think it is probably worth  
33 just saying that on the human side generic products are  
34 authorised products. They are products that have been  
35 manufactured as copies, if you wish to use that term, of a  
36 branded product, but they have been through the authorisation  
37 process, and proved to be of equivalent quality, safety and  
38 efficacy.

39 We have the same situation on the veterinary side, and  
40 there are a number of products on the veterinary side where  
41 other companies have produced branded generic copies of other  
42 people's products. But the other term that is used for generic

1 is this generic substitution where there is the potential to use  
2 the human product in the veterinary sector, but that human  
3 product, whilst being a generic of a human product, has not been  
4 through the authorisation process.

5 So I think we need to be a little careful when we are  
6 talking about generics. There are authorised generic products,  
7 but there is the issue of generic substitution where it means  
8 using unauthorised products. I think that goes to the  
9 importation side as well. The question was asked about the Irish  
10 products. All of the Irish products that are authorised have  
11 been through the Irish Medicines Board process, which is  
12 virtually identical to ours, so they are authorised products.  
13 The problem that anyone has is just because the brand name is  
14 the same does not necessarily mean that the formulation is  
15 exactly the same. Therefore, importation of a product authorised  
16 in Ireland can only be legal if the same product has been  
17 authorised in the UK as well, and you can tell that because we  
18 actually have a mutual recognition process and we are in the  
19 process of producing a list with the Irish Medicines Board so  
20 customers can identify products that are available in Ireland  
21 that are also available here, that have been mutually  
22 recognised.

23 Thank you.

24 **THE CHAIRMAN:** Thank you for that, that is helpful. Before we leave  
25 this topic I would like to throw out a couple of questions that  
26 we have not actually covered, and that is what the role of the  
27 insurance industry is in this at all? Do veterinary surgeons  
28 discriminate between clients in their charges for POMs according  
29 to whether or not the animal is insured? I do not know whether  
30 anybody has any insight in to this? This is one of the issues  
31 that has been raised with us.

32 **MR EVEREST** (Pet Plan Insurance): I have to say we have heard these  
33 allegations in the past about veterinary surgeons and insurance,  
34 but we have never seen any evidence to back that up.

35 Just talking generally from what I have heard today about  
36 insurance, I am not sure whether having a mix between veterinary  
37 surgeons dispensing medication and pharmacists would actually  
38 benefit our customers at the end of the day by reducing the  
39 premiums. Currently we have the information coming through the  
40 vet with the claim. If we then involve the pharmacist as well we  
41 are getting information from two different areas. We are getting  
42 perhaps invoices that come through with a claim and we will have

1 more pieces of paper to deal with, and another area to gain  
2 information from, to speak to pharmacists to gather information  
3 as to what is on that invoice. At the end of the day with the  
4 volume of claims that we have it may potentially create more  
5 admin costs which would have to relate in premium to our  
6 customers at the end of the day.

7 **THE CHAIRMAN:** How do the human health insurers cope with this?

8 **MR EVEREST:** There is no real equivalent between pet insurance and  
9 human health, because obviously what we are talking about here  
10 with a vet is like a GP, whereas the human health is talking  
11 about referring to consultants, and surgery. So it does not  
12 really apply in the same way.

13 **THE CHAIRMAN:** I am not sure I have entirely understood this, but I  
14 am sure it is something I can investigate at a certain point.

15 **MR EVEREST:** Well, I can give you as much information as you want on  
16 that.

17 **THE CHAIRMAN:** All right. Are there any other comments? I did want to  
18 hear a little bit more from the floor about the way in which  
19 veterinary surgeons are influenced in their buying decisions by  
20 the rebates and discounts that are offered by the veterinary  
21 manufacturers - the point that I raised with one of the  
22 speakers. Is there anyone on the floor who would like to make  
23 any comments on that, because there is some suggestion that the  
24 rebates and discounts reduce the choice of medicine supplies and  
25 the value for money obtained by animal owners. Has anybody any  
26 comments on that one? It is obviously a sensitive subject I am  
27 sure, but nevertheless--- [no comments]

28 All right, I will move on to the next item, and that is  
29 prices effectively, Manufacturers' list prices for prescription  
30 only medicines - perhaps this issue of rebates will come into  
31 that. I am going to call upon Mr Mike Nelson to speak to us  
32 about this.

#### 33 **Topic 4**

#### 34 **Manufacturers' list prices for prescription only medicines** 35 **in the UK**

36 **MR NELSON:** Madam Chairman, ladies and gentlemen - I am not sure  
37 that that is politically correct, but I do not believe that  
38 political correctness should have a monopoly.

39 I believe I should justify my presence here today. You are  
40 wondering how this old gentleman should be coming in on the act  
41 - not representing any organisation but listed as "an  
42

1 investigative veterinary journalist". I hope my appearance may  
2 offer at least the view of experience if not wisdom. I can claim  
3 experience, but my innate modesty prevents me referring to the  
4 wisdom.

5 Until I retired from practice nearly six years ago I had a  
6 fairly varied professional life - four years of mixed practice,  
7 18 years in the pharmaceutical industry, and then I gave up the  
8 rat race and started a small animal practice in South London,  
9 and in 1976 retired after 20 years at that.

10 On October 20th I read that the Competition Commission  
11 invited submission of evidence by November 9th in that day's  
12 Veterinary Record. I believed that my experience and contacts  
13 might help because there was one thing that the Marsh Report did  
14 not cover and that was the price paid by vets for their  
15 medicines that they supplied, and it seemed important to me to  
16 at least look at it because I knew very well that there were  
17 differences.

18 It so happened that I sat next to Roger Green, the  
19 President of the Royal College at a meeting on October 25th. The  
20 following day he e-mailed me the addresses of two of his  
21 contacts, one in Holland and one in Belgium.

22 We were expected to make submissions by November 9th,  
23 although that was subsequently changed to November 23rd. I only  
24 mention this because it is really due to these contacts that we  
25 managed to get information. Although I received no response from  
26 Belgium with my e-mail I did from Holland, along with a price  
27 list that arrived on November 12th (from October 26th).

28 Following a fax to my own contact in France on October  
29 26th I received a telephone call the following day and a price  
30 list arrived the following week. There was no comparable list in  
31 Spain. Three weeks ago at the Small Animal Congress I was told  
32 by a Spanish vet that I met that in Spain manufacturers will  
33 appoint a distributor and there is no one real veterinary  
34 wholesaler which covers everything to supply the vets, so the  
35 vets have to go to various sources, so there were no price  
36 lists.

37 In order to compare apples and apples I restricted the  
38 comparison and prices to the identical branded products between  
39 the UK, France and Holland, and I went through all this piece by  
40 piece. There happened to be 179 French products, and 181 Dutch  
41 products that were in the UK price list. Why did I choose these?  
42 Because you must rule out any other variables like the use of

1 generics and we have had a very useful definition which saves me  
2 time to cover.

3 So by comparing like with like there were one or two  
4 differences. There were five products marketed in France. They  
5 were a different pack size, or a different concentration. So the  
6 price comparison could only be calculated on an equivalent  
7 active ingredient involvement. The list price to French vets  
8 with 181 products averaged 67.05 per cent. of the UK price list,  
9 and the average for Holland was 67.9 per cent.

10 In your folders on the back of my sheet there is a chart  
11 which actually shows the spread of all those products France and  
12 Holland, as percentages of the UK list price. In fact, 42 per  
13 cent. of the products in France cost the vet (all list prices  
14 were to the vet) between 60 and 80 per cent. of the UK list  
15 price. It was 50 per cent. of the Dutch products that came  
16 within that category in Holland. On this basis it is hardly  
17 surprising that clients are charged more for POMs in the UK than  
18 on the Continent.

19 Now, there will be people who would argue that the list  
20 price is not necessarily what the vet pays. But what I wanted to  
21 do was compare like with like. In fact, if you go around  
22 veterinary practices you will find that different practices  
23 maybe pay a different price for the same product, depending on a  
24 number of variables, and it is not my concern to go into that.  
25 Maybe the discounts on the Continent are of a completely  
26 different structure to that here. Again, that is not something I  
27 feel that I should go into. All that remains is that there is a  
28 very clear difference between the UK and France and Holland, and  
29 if I had had more time and maybe managed to get a few more price  
30 lists within the time limits, maybe we could have established a  
31 bit more. Then, on the other hand, I think the Competition  
32 Commission could very well be working on that.

33 Finally, I feel rather flattered that you should invite me  
34 to come along and make this presentation. I think it adds  
35 another layer into the complexities of the Competition  
36 Commission inquiry. My length of hair is not because of any  
37 shortage of money, I have not made that much money in veterinary  
38 practice but having attended every BVA Congress except three  
39 since 1959 and every BSAVA Congress without exception since 1962  
40 I have met an awful lot of vets and I can assure you that the  
41 only fat cats I saw were on my surgery table.

42 Thank you, madam Chairman.

1 **THE CHAIRMAN:** Thank you very much indeed, Mr Nelson. We are grateful  
2 to you for your contribution. We were advised that you might be  
3 provocative and I hope your contribution this morning has  
4 succeeded in provoking some responses.

5 I have to say that there is one sector that we have heard  
6 very little from today, and that is from the representatives of  
7 the manufacturers, and I wondered if any of them would like to  
8 come back and comment on some of the points that Mr Nelson has  
9 made or any of the other points that have been heard today. [**no**  
10 **comments**]

11 Is there any convincing evidence other than what we have  
12 heard from Mr Nelson that list prices in the UK are higher  
13 compared to other European countries?

#### 14 **General Discussion**

15 **MR EDDY** (Royal College of Veterinary Surgeons): Speaking as a farm  
16 animal practitioner in Somerset of 35 years' experience, I did a  
17 similar exercise to Mike Nelson two years ago, comparing  
18 products in Ireland, Northern Ireland and Gt. Britain, looking  
19 like for like at list prices from wholesalers and the amazing  
20 thing was there were even differences - big differences - for  
21 some products for some companies between Gt. Britain and  
22 Northern Ireland, let alone differences, much bigger differences  
23 between Gt. Britain and the Republic of Ireland.

24 There is a lot of anecdotal evidence but there are a lot  
25 of veterinary surgeons in Northern Ireland who get their  
26 supplies from Southern Ireland - it is just across the border,  
27 not far to go.

28 Now, the gentleman from the Scottish NFU mentioned the  
29 black market which is quite strong in Scotland. We understand it  
30 is very strong in South Wales, and other parts of Gt. Britain.  
31 We have heard mention, and there is an insinuation in your  
32 documentation that perhaps veterinary surgeons are not very good  
33 businessmen. We have also heard that to succeed you have to be a  
34 reasonable practitioner at business as well as veterinary  
35 medicine. I would suggest that in those areas where the black  
36 market exists, and it exists because farmers - we are talking  
37 about farm products - can get products very much cheaper on the  
38 black market as we have heard, that exists because the vets  
39 cannot compete. If they could compete I am sure they would  
40 compete.

41 So the evidence that Mike Nelson has presented, and the  
42 evidence I accumulated myself two years ago add to the support

1 and suggestion that like motor cars, like washing machines, like  
2 beer everything costs more in the United Kingdom than it seems  
3 to cost in most of the other European countries.

4 **THE CHAIRMAN:** Again, I would call upon perhaps the manufacturers to  
5 give us some explanations of this. I would not expect  
6 manufacturers to discuss prices in detail in the presence of  
7 their competitors, but it would be helpful to hear from them as  
8 to what factors might account for price differences between the  
9 UK and other countries. [no comments]

10 I have to say it is of concern to me that there is a  
11 deafening silence from those who perhaps might be best able to  
12 give us some help in this area. [no comment]

13 Well, we will draw our conclusions in those circumstances.

14 Is there anybody else who would like to comment in this  
15 area? [no comment]

16 Is there any representative from the veterinary side who  
17 would like to say anything about comparative prices between the  
18 UK and the rest of Europe? [no comment]

19 We have an e-mail here which I think I would ask my  
20 colleague to read out.

21 **E-mail received**

22 **MR SMITH:** This has just come in. It is from an Ann Thomson. She has  
23 a question and a couple of comments. The first question is  
24 addressed at Mr Dean of the VMD.

25 *"Could it be that Her Majesty's Government's view that the*  
26 *VMD be a total cost recovery agency be a factor in the*  
27 *high cost of veterinary medicines. Comparisons of prices*  
28 *from other EC countries, while useful in itself as an*  
29 *indicator, does not necessarily indicate a comparison of*  
30 *cost of placing a veterinary medicine or product on the*  
31 *market. Furthermore, as far as pricing rebates and*  
32 *discounts are concerned, it would appear to me that within*  
33 *all business sectors some form of volume related benefit*  
34 *exists. It would surely be crass stupidity to deny the*  
35 *existence of economies of scale derived from normal*  
36 *business practices."*

37 **THE CHAIRMAN:** Quite a helpful intervention. Is there anything else  
38 that anybody wishes to say?

39 **MR SMITH:** There is the question about the cost of the UK  
40 regulatory system being part of the explanation of the high cost  
41 of the marketing and supplying in the United Kingdom?  
42

1 **A** **SPEAKER:** The issue of manufacturers' prices is an immensely  
2 complex issue. I think you can appreciate that there are many  
3 reasons why list prices will differ between countries. I  
4 understand that you are going to implement a market research  
5 programme yourselves, and we have offered to comment on the  
6 methodology, but I think that it is very difficult to comment  
7 generally, particularly on list prices and prices between  
8 markets.

9 **THE** **CHAIRMAN:** I accept that totally. What we are interested in is  
10 some of the broad factors, some of the broad indicators that we  
11 perhaps ought to be directing our attention towards. As I say,  
12 it is inappropriate in a forum like this to discuss price  
13 comparisons in detail, but there does seem to be from many  
14 sources that prices are higher in the UK than they are  
15 elsewhere. There may be very good reasons for that. There may  
16 be quite appropriate reasons for that associated with the  
17 regulatory regime, with health, with all sorts of things. What  
18 we need to do, and what we wish to hear is simply some of those  
19 factors that might take that into account.

20 **MR** **DEAN** (Veterinary Medicines Directive): I think I did try to make  
21 the point to answer that question when I spoke and that is the  
22 cost of the regulatory system is equivalent across Europe in  
23 terms of the development of data because we have common data  
24 requirements, and that is the lion's share of the cost of a  
25 veterinary medicine authorisation. It is the development of  
26 data.

27 **THE** **CHAIRMAN:** But that should be the same throughout the EU.

28 **MR** **DEAN:** Yes, it should, correct. In terms of what we charge to  
29 actually do the assessment work. It is true that we go for 100  
30 per cent. cost recovery. It is true that it ranges throughout  
31 Europe from 100 per cent. down to zero per cent. But the other  
32 factor, which I have to put in if for nothing else to defend the  
33 VMD, is that there is the issue of time taken. From the industry  
34 perspective if it costs you nothing but it takes you five years  
35 to get an authorisation, or it costs you let us say £10,000 but  
36 you get the authorisation in 18 months, there is a huge benefit  
37 to the industry in that type of efficiency. I think there is a  
38 valid question about the cost of the actual authorisation  
39 process, but I do not think it is a significant factor in terms  
40 of the cost of a veterinary medicine. It is really the data  
41 generation that would be the significant cost.

42

1 **MR THEMANS** (Chairman, Inputs Group, NFU): When we look at  
2 legislation it is not the immediate cost that we ought to be  
3 concerned with, it is the disincentive, in fact the  
4 impossibility through approval systems, but in encouraging trade  
5 any disincentive can have a huge effect on the market.

6 I was a member of the Inputs Task Force which was another  
7 one of Professor Marsh's, and in asking why do farmers not  
8 import the other inputs legally it actually took about a 10 per  
9 cent. premium to actually make that import necessary. It is a  
10 disincentive. You must not dismiss this one, it is a very  
11 important factor.

12 **MR WILLIAMS** (NPA): On the subject of manufacturer prices, we tried  
13 to make some comparisons by asking pharmacies throughout Europe  
14 from our list of contacts about relative manufacturer prices. We  
15 did get some which we submitted to you, but we also got an  
16 interesting letter from the British office of a European  
17 manufacturer, who we did not contact, so presumably in all  
18 innocence one of the pharmacies in Europe contacted him, who  
19 said:

20 *"Your request for veterinary prices in Europe has been*  
21 *passed to me by our European office. We have sent all*  
22 *European prices directly to the Competition Commission and*  
23 *this information should cover their needs."*

24 So they continue, perhaps, to find it difficult to discuss  
25 this matter.

26 **THE CHAIRMAN:** We at the Competition Commission do not take the  
27 stance that we are pointing the finger at anyone. We are  
28 investigating the whole of the supply chain here, and we want to  
29 know, because this is what we are concerned with, whether or not  
30 the market is operating competitively, and the point of  
31 competition is to benefit those who are the recipients of the  
32 goods or services which are being investigated, and at the  
33 present moment we have had more complaints in this area than we  
34 have in any other subject that we have investigated. There  
35 certainly seems to be a ground swell, certainly of those who  
36 write to us anyway, that prices are too high, and we are trying  
37 to get to the bottom of why.

38 **MR BLACK:** (Chairman, NOAH): One of the things that would perhaps  
39 cause a difference in prices across Europe is that many of the  
40 drugs, the POMs that you are using are derived from their human  
41 equivalents. Most of the drugs that are used in our industry  
42 come from that source because as an industry there is no money,

1 the markets are not big enough and therefore you derive your  
2 source from the human.

3 Now, as somebody who has spent 20 years on the human side  
4 before moving into the animal health side, most of the cost of  
5 drugs on human medicine are negotiated with national governments  
6 and therefore it comes as no surprise that the poorer countries  
7 in Europe, such as the countries that have been mentioned, are  
8 supplied these drugs at cheaper than the United Kingdom and the  
9 more wealthier countries of Northern Europe.

10 There is just another comment I would like to make. As  
11 somebody who has moved from the one side to the other, in the  
12 ten years that I have been involved I have watched this side of  
13 the business being reduced from about 30 major companies down to  
14 15. Now, if people are in the business to make profit as our  
15 gentleman from the pharmacy infers, maybe he could tell me why  
16 the number has halved in ten years. There is not one British  
17 company left in animal research in medicine - not one. The only  
18 two or three that are available, and that are doing research are  
19 doing it into vaccines and anthelmintics which are the products  
20 that these people seem to be interested in.

21 As somebody who has made this industry my life I would  
22 like to say to everyone if we are not careful there will not be  
23 an industry, and the very animals that we are here to try and  
24 look after and protect will be the ones that will suffer at the  
25 end.

26 **MR BOWER** (Veterinary Advisory Group to Pet Insurance Industry):  
27 Practising veterinary surgeon, small animal practice, also an  
28 adviser to one of the pet insurance companies, and here  
29 representing the Veterinary Advisory Group to the pet insurance  
30 industry.

31 Surprisingly nobody has said what I think will happen if  
32 there is an extra link in the chain of the supply of veterinary  
33 medicines. I have been trying to think of any other industry,  
34 any other profession, where you add an extra link in the supply  
35 that does not actually increase costs, and I cannot help  
36 thinking that this will be so.

37 In fact, this was brought home at a recent meeting between  
38 the Royal College and the pet insurance industry where a  
39 director of major pet insurance company which, let us face it,  
40 are a consumer as much as the pet owner - they pay the fees -  
41 said "Surely, surely you are not going to add another link in  
42 the chain, it can only put up prices". That is the first point I

1 would like to make.

2 The second point is veterinary fees, and I think Sir John  
3 Marsh pointed this out, and I believe the Competition Commission  
4 has already expressed surprise at how low the veterinary  
5 surgeons fees for their time are. Let us just analyse what is  
6 involved in writing a prescription. One of the first speakers  
7 today said that to write a prescription you have first of all to  
8 take a telephone call, and it cannot be a message passed on.  
9 Only a veterinary surgeon can write a prescription, not a nurse,  
10 not a receptionist. So they have to take the telephone call,  
11 then they have to very carefully check the history and the  
12 previous treatment of that particular pet which takes time,  
13 calling it up on a computer or looking at the record cards. They  
14 have to check the history and the dates. They have then to  
15 decide on the appropriate medication. When you realise that our  
16 patients can weigh anything from a budgerigar up to a great  
17 Dane, and there are different licences for different products,  
18 we have to work out which product to use, what the dose rate is  
19 and this is not a two minute job. Then having decided all that  
20 we have to decide on the safety aspects of the number of repeats  
21 we can write on that prescription. Having decided all that we  
22 then write the prescription.

23 Now, it does not take out very long to work out that that  
24 is not a two minute job. That is a job that will take some  
25 little time and if we charge appropriately dare I say it, at the  
26 same rate as lawyers, solicitors, accountants, indeed private  
27 doctors would charge, then it is not a matter of just an  
28 administrative charge. This is a veterinary surgeon's time spent  
29 in performing a very important function.

30 **THE CHAIRMAN:** Thank you. Before I start winding-up, are there any  
31 more comments? I do not want anybody to leave this room feeling  
32 they have not had their chance.

33 **MR WILLIAMS:** May I respond to the point about putting extra links  
34 in the chain. In human medicine pharmacy might be described as  
35 an extra link in the chain, but in fact dispensing doctors who  
36 do it all themselves cost the NHS more than pharmacies do. When  
37 opticians were forced to give prescriptions for glasses costs  
38 fell. Finally, remarks about the administration of repeat  
39 prescriptions, GPs manage to do it very well with technicians,  
40 and the highly qualified technicians who assist veterinary  
41 surgeons ought to be able to do the same.

42 **MR SKETCHLEY (NOAH):** As I have mentioned before to the Commission

1 it is not our role within NOAH to comment on costings and  
2 pricings etc., because as we explained we are mainly involved in  
3 regulatory issues.

4 However, I think it has to be said that Mr Nelson made  
5 some interesting comparisons, and I acknowledge his points about  
6 comparing apples with apples. I think it is now important  
7 through certainly the questions that I know the Commission has  
8 already asked our individual members, that comparisons are made  
9 of the true net buying price after discounts have been applied  
10 either by wholesalers and or manufacturers, and then compare  
11 those to other European equivalents. Then we will perhaps be  
12 able to see if there are any true differences.

13 **Closing remarks**

14 **THE CHAIRMAN:** Thank you, and I think on that note I am going to draw  
15 the proceedings to a close. We have had a very useful discussion  
16 and I would like to thank everybody who has taken part. We will  
17 be reflecting on much of what we have heard this morning in the  
18 rest of our inquiries.

19 Some of those present will be asked to attend private  
20 hearings to explore the matters outlined in the Issues  
21 Statement. There is obviously a difference between those issues  
22 that it is sensible to discuss in public, and those which it is  
23 better to explore in more depth in private. We will, however,  
24 still be interested to receive any comments on any of the issues  
25 that we have had today or indeed any other matter which is  
26 relevant to our inquiry. We are interested to receive that from  
27 any of the organisations present or indeed anybody who is  
28 participating in this inquiry via the webcast.

29 We are particularly grateful to the veterinary  
30 practitioners and the pharmacists who have contributed to our  
31 lively discussion today. I do not want anybody to go away,  
32 however, with the sense that this is a "them" and "us" situation  
33 at all. As I said in my comments, we are looking to see how the  
34 whole of the supply chain works, how it interacts with each  
35 other, and what impact that has on the end consumer. But that  
36 will be the subject of our deliberations over the next few  
37 months and I am grateful for your help and your contributions  
38 this morning.

39 Thank you very much indeed.

40 **(The hearing concluded at 1 pm)**

41 -----
